I

COUNCIL

COMMON POSITION (EC) No 7/2002
adopted by the Council on 29 October 2001

(2002/C 45 E/01)

(Text with EEA relevance)

THE EUROPEAN PARLIAMENT AND THE COUNCIL OF THE EUROPEAN UNION,

Having regard to the Treaty establishing the European Community, and in particular Article 95 thereof,

Having regard to the proposal from the Commission (1),

Having regard to the opinion of the Economic and Social Committee (2),

Acting in accordance with the procedure laid down in Article 251 of the Treaty (3),

Whereas:

(2) All the separate directives, provided for in the exhaustive list of systems, components and separate technical units to be regulated at Community level, have been adopted.

(3) The commencement of the application of Directive 97/24/EC of the European Parliament and of the Council of 17 June 1997 on certain components and characteristics of two or three-wheel motor vehicles (5) allows the type-approval procedure to be applied in full.

(4) It is clearly necessary, in order that the type-approval system may work properly, to clarify certain administrative instructions and to supplement the norms contained in the Annexes to Directive 92/61/EEC. With this in view, it is necessary to introduce harmonised norms concerning, in particular, the numbering of type-approval certificates as well as exemptions for end-of-series vehicles and for vehicles, components and separate technical units incorporating technologies which are not yet covered by Community arrangements, in the manner of the analogous norms of Council Directive 70/156/EEC of 6 February 1970 on the approximation of the laws of the Member States relating to the type-approval of motor vehicles and their trailers (6).

(5) Account being taken of currently established technologies, examination of the components and characteristics of the said vehicles has resulted in the retention only of those set out in Annex I to this Directive since all others are inappropriate for regulatory purposes. However, in view of progress and developments in technology, it will be appropriate to examine any further components and characteristics, in particular those relating to secondary safety, to be added to those already listed in the said Annex I.

(6) The Community approval procedure is intended to enable each Member State to confirm that each type of vehicle has undergone the checks provided for in the separate directives and has been issued with a type-approval certificate. It is also intended to enable manufacturers to prepare a certificate of conformity for all vehicles conforming to the type that has been approved. When a vehicle is accompanied by this certificate it may be placed on the market, sold and registered for use throughout the Community.

(7) Since the objectives of improving the functioning of the system of Community vehicle approval according to type cannot be sufficiently achieved by the Member States individually and can therefore, given the scale and the impact of the measures proposed, be better achieved at Community level, the Community may adopt measures in accordance with the principle of subsidiarity as set out in Article 5 of the Treaty. In accordance with the principle of proportionality as set out in that Article, this Directive does not go beyond what is necessary in order to achieve those objectives.

(8) The measures necessary for the implementation of this Directive should be adopted in accordance with Council Decision 1999/468/EC of 28 June 1999 laying down the procedures for the exercise of implementing powers conferred on the Commission (1).

(9) For reasons of clarity it is advisable to repeal Council Directive 92/61/EEC and replace it by this Directive,

HAVE ADOPTED THIS DIRECTIVE:

CHAPTER I

SCOPE AND DEFINITIONS

Article 1

1. This Directive applies to all two or three-wheel motor vehicles, whether twin-wheeled or otherwise, intended to travel on the road, and to the components or separate technical units of such vehicles.

This Directive does not apply to the following vehicles:

(a) vehicles with a maximum design speed not exceeding 6 km/h,

(b) vehicles intended for pedestrian control,

(c) vehicles intended for use by the physically handicapped,

(d) vehicles intended for use in competition, on roads or in off-road conditions,

(e) vehicles already in use before the application date of Directive 92/61/EEC,

(f) tractors and machines, used for agricultural or similar purposes,

(g) vehicles designed primarily for off-road leisure use having wheels arranged symmetrically with one wheel at the front of the vehicle and two at the rear,

(h) cycles with pedal assistance which are equipped with an auxiliary electric motor having a maximum continuous rated power of 0,25 kilowatts, of which the output is progressively reduced and finally cut off as the vehicle reaches a speed of 25 km/h, or sooner, if the cyclist stops pedalling,

nor to the components or technical units thereof unless they are intended to be fitted to vehicles covered by this Directive.

It does not apply to the approval of single vehicles except that Member States granting such approvals shall accept any type-approval of components and separate technical units granted under this Directive instead of under the relevant national requirements.

2. The vehicles referred to in paragraph 1 shall be subdivided into:

(a) mopeds, i.e. two-wheel vehicles (category L1e) or three-wheel vehicles (category L2e) with a maximum design speed of not more than 45 km/h and characterised by:

(i) in the case of the two-wheel type, an engine whose:

— cylinder capacity does not exceed 50 cm$^3$ in the case of the internal combustion type, or

— maximum continuous rated power is no more than 4 kW in the case of an electric motor;

(ii) in the case of the three-wheel type, an engine whose:

— cylinder capacity does not exceed 50 cm$^3$ if of the spark (positive) ignition type, or

— maximum net power output does not exceed 4 kW in the case of other internal combustion engines, or

— maximum continuous rated power does not exceed 4 kW in the case of an electric motor;

(b) motorcycles, i.e. two-wheel vehicles without a sidecar (category L3e) or with a sidecar (category L4e), fitted with an engine having a cylinder capacity of more than 50 cm$^3$ if of the internal combustion type, and/or having a maximum design speed of more than 45 km/h,

(c) motor tricycles, i.e. vehicles with three symmetrically arranged wheels (category L5e) fitted with an engine having a cylinder capacity of more than 50 cm$^3$ if of the internal combustion type and/or a maximum design speed of more than 45 km/h.

3. This Directive shall also apply to quadricycles, i.e. motor vehicles with four wheels having the following characteristics:

(a) light quadricycles whose unladen mass is not more than 350 kg (category L6e), not including the mass of the batteries in case of electric vehicles, whose maximum design speed is not more than 45 km/h and

(i) whose engine cylinder capacity does not exceed 50 cm$^3$ for spark (positive) ignition engines, or

(ii) whose maximum net power output does not exceed 4 kW in the case of other internal combustion engines, or

(iii) whose maximum continuous rated power does not exceed 4 kW in the case of an electric motor.

These vehicles shall fulfil the technical requirements applicable to three-wheel mopeds of category L2e unless specified differently in any of the separate directives;

(b) quadricycles, other than those referred to in point (a), whose unladen mass is not more than 400 kg (category L7e) (550 kg for vehicles intended for carrying goods), not including the mass of batteries in the case of electric vehicles, and whose maximum net engine power does not exceed 15 kW. These vehicles shall be considered to be motor tricycles and shall fulfil the technical requirements applicable to motor tricycles of category L5e unless specified differently in any of the separate directives.

2. 'variant' means either a vehicle or a group of vehicles (versions) being of the same type where:

(a) they have the same shape of bodywork (basic characteristics);

(b) within the group of vehicles (versions) the difference in the mass in running order between the lowest value and the highest value does not exceed 20 % of the lowest value;

(c) within the group of vehicles (versions) the difference in the maximum permissible mass between the lowest value and the highest value does not exceed 20 % of the lowest value;

(d) they have the same operating cycle (two or four stroke, spark ignition or compression ignition);

(e) within the group of vehicles (versions) the difference in the cylinder capacity of the power unit (in the case of an internal combustion unit) between the lowest value and the highest value does not exceed 30 % of the lowest value;

(f) have the same number and arrangement of cylinders;

(g) within the group of vehicles (versions) the difference in the power output of the power unit between the lowest value and the highest value does not exceed 30 % of the lowest value;

(h) have the same operating mode (of electric motors);

(i) have the same type of gearbox (manual, automatic, etc.);

3. 'version' means a vehicle of the same type and variant but which may incorporate any of the equipment, components or systems listed in the Information Document in Annex II provided that there is only:

(a) one value quoted for:

(i) the mass in running order;

(ii) the maximum permissible mass;

(iii) the power output of the power unit;

(iv) the cylinder capacity of the power unit, and:

(b) one set of test results quoted in accordance with Annex VII.
4. 'system' means any vehicle system such as brakes, emission control equipment, etc. which is subject to the requirements laid down in any of the separate directives;

5. 'separate technical unit' means a device, such as a replacement exhaust system silencer, subject to the requirements of a separate directive, intended to be part of a vehicle, which may be type-approved separately but only in relation to one or more specified types of vehicles, where the separate directive makes express provision for so doing;

6. 'component' means a device, such as a lamp, subject to the requirements of a separate directive, intended to be part of a vehicle, which may be type-approved independently of a vehicle, where the separate directive makes express provision for so doing;

7. 'type-approval' means the procedure whereby a Member State certifies that a type of vehicle, system, separate technical unit or component satisfies the technical requirements set out in this Directive or the separate directives and the checks on the correctness of the manufacturer's data, as provided for in the exhaustive list set out in Annex I;

8. 'twinned wheels' means two wheels mounted on the same axle, the distance between the centres of their areas of contact with the ground being less than 460 mm. Twinned wheels shall be considered as one wheel;

9. 'twin-propulsion vehicles' means vehicles with two different systems of propulsion, for example an electric system and a thermic system;

10. 'manufacturer' means the person or body responsible to the approval authority for all aspects of the type-approval process and for ensuring conformity of production. It is not essential that the person or body is directly involved in all stages of the construction of the vehicle, component or separate technical unit covered by the approval process;

11. 'technical service' means the organisation or body that has been appointed as a testing laboratory to carry out tests or inspections on behalf of the approval authority of a Member State. This function may also be carried out by the approval authority itself.

CHAPTER II

PROCEDURES FOR GRANTING TYPE-APPROVAL

Article 3

Applications for type-approval shall be submitted by the manufacturer to the approval authority of a Member State. They shall be accompanied by an information document, a model of which, for vehicle type-approval purposes, is set out in Annex II and, for type-approval purposes of systems, separate technical units or components, is contained in an Annex or Appendix to the relevant system, separate technical unit or component directive, and also by the other documents referred to in the information document. Applications for a given type of vehicle, system, separate technical unit or component may be submitted to one Member State only.

Article 4

1. Each Member State shall grant type-approval to all types of vehicle, systems, separate technical units or components if these meet the following conditions:

(a) the type of vehicle meets the technical requirements of the separate directives and is as described by the manufacturer in accordance with the data provided for in the exhaustive list set out in Annex I;

(b) the system, separate technical unit or component meets the technical requirements of the relevant separate directive and is as described by the manufacturer in accordance with the data provided for in the exhaustive list set out in Annex I.

2. Before conducting type-approval, the competent authorities in the Member State which carry out these operations shall take all necessary steps to ensure, if necessary in cooperation with the competent authorities in the Member State where manufacturing takes place or the product is brought into the Community, that there is compliance with the provisions of Annex VI in order that the new vehicles, systems, separate technical units or components manufactured, placed on the market, offered for sale or put into service, conform to the approved type.

3. The competent authorities referred to in paragraph 2 shall ensure, if necessary in cooperation with the competent authorities in the Member State where manufacturing takes place or the product is brought into the Community, that the provisions of Annex VI continue to be observed.

4. Where an application for type-approval for a type of vehicle is accompanied by one or more type-approval certificates of a system, separate technical or component unit issued by one or more Member States, the Member State conducting type-approval for a type of vehicle shall be obliged to accept them and shall not perform, in respect of the systems, separate technical units and/or components which have been type-approved, the checks required by paragraph 1(b).
5. Each Member State shall be responsible for the type-approval of a system, separate technical unit or component that it grants. The competent authorities in the Member State which grant type-approval for a type of vehicle shall check conformity of production, where necessary in cooperation with those competent authorities in the other Member States which have issued type-approval certificates for systems, separate technical unit or components.

6. However, if a Member State finds that a vehicle, system, separate technical unit or component which complies with the provisions of paragraph 1 is nevertheless a serious risk to road safety, it may refuse to grant the type-approval. It shall forthwith inform the other Member States and the Commission thereof, stating the reasons on which its decision is based.

Article 5

1. The competent authority in a Member State shall complete the type-approval form contained in Annex III for all types of vehicles in respect of which it conducts type-approval, and in addition shall enter the test results under the relevant headings on the form attached to the vehicle approval form, the model for which is given in Annex VII.

2. The competent authority in a Member State shall complete the type-approval form contained in an Annex or an Appendix to each relevant separate directive, for each type of system, separate technical unit or component in respect of which it conducts type-approval.

3. Type-approval certificates of a system, separate technical unit or component shall be numbered in accordance with the method described in Annex V(A).

Article 6

1. The competent authority in each Member State shall forward to those of the other Member States, within one month, a copy of the type-approval certificate, together with the annexes for each type of vehicle that they type-approve or refuse to type-approve.

2. The competent authority in each Member State shall send monthly to the competent authorities of the other Member States, a list of the type-approvals of a system, separate technical unit or component, which it has granted or refused to grant during that month.

In addition, at the request of a competent authority of another Member State, it shall send forthwith a copy of the type-approval certificate together with the annexes for each type of system, separate technical unit or component.

Article 7

1. A certificate of conformity, a model of which is shown in Annex IV(A), shall be completed by the manufacturer for each vehicle produced in conformity with the type that has been approved. Such a certificate shall accompany each vehicle. However, Member States may request, after giving at least three months' notice to the Commission and other Member States, for reasons of vehicle taxation or in order to draw up the vehicle registration document, that the certificate of conformity shall contain details other than those mentioned in Annex IV(A), provided that those details are explicitly included in the information document.

The certificate of conformity shall be made in such a way as to prevent any forgery. For this purpose, the printing shall be made on paper protected either by coloured graphics or water-marked with the vehicle manufacturer's identification mark.

2. A certificate of conformity, a model of which is shown in Annex IV(B), shall be completed by the manufacturer for each non-original separate technical unit or component manufactured in conformity with the approved type. That certificate is not required for original separate technical units or components.

3. Where the separate technical unit or component to be type-approved performs its function or displays a specific characteristic only in conjunction with other components of the vehicle and for this reason compliance with one or more requirements can be verified only when that separate technical unit or component to be approved functions in conjunction with other vehicle components whether real or simulated, the scope of the type-approval of that separate technical unit or component must be restricted accordingly. The type-approval certificate for a separate technical unit or component shall then set out any restrictions on use and any instructions for fitting it. Compliance with these restrictions and requirements shall be verified when the vehicle is type-approved.

4. Without prejudice to paragraph 2, the holder of a type-approval for a separate technical unit or component that has been granted under Article 4 shall be obliged to affix to each such separate technical unit or component manufactured in conformity with the approved type, his factory or trade mark, a statement of the type and, if the separate directive so requires, the type-approval mark referred to in Article 8. In this latter case, he is not required to complete the certificate provided for in paragraph 2.

5. Any holder of a type-approval certificate for a separate technical unit or component which, under paragraph 3, contains restrictions on use, must supply detailed information on those restrictions and must give fitting instructions, where appropriate, with each separate technical unit or component manufactured.
6. Any holder of a type-approval certificate for a separate technical unit of non-original equipment, issued in connection with one or more types of vehicle, must with each such unit supply detailed information allowing those vehicles to be identified.

**Article 8**

1. Any vehicle produced in conformity with the type which has been type-approved shall bear a type-approval mark composed in accordance with section 1, section 3 and section 4 of the type-approval number, set out in Annex V(A).

2. Any separate technical unit and any component produced in conformity with the type having been type-approved shall include, if the relevant separate directive so provides, a type-approval mark which meets the requirements set out in Annex V(B). The type-approval number listed in Annex V(B), paragraph 1.2 shall be composed in accordance with section 4 of the type-approval number set out in Annex V(A).

The information contained in the type-approval mark may be supplemented by further information enabling certain characteristics which are specific to the separate technical unit or component at issue to be identified. That further information shall, where appropriate, be specified in the separate directives on those separate technical units or components.

**Article 9**

1. The manufacturer shall be responsible for the manufacture of each vehicle or the production of each system, separate technical unit or component in compliance with the approved type. The final cessation of production or any changes to the information contained in the information document must be notified by the type-approval holder to the competent authorities in the Member State which issued that type-approval.

2. If the competent authorities of the Member State referred to in paragraph 1 consider that a change of this type does not involve any change to the existing type-approval certificate, or the drawing up of a new type-approval certificate, they shall inform the manufacturer accordingly.

3. If the competent authorities in the Member State referred to in paragraph 1 confirm that a change in the information set out in the information document justifies new checks or new tests, they shall inform the manufacturer accordingly and shall perform those tests. Should the checks or tests involve amendments to the existing type-approval certificate or the drawing up of a new certificate, the authorities shall inform the competent authorities of the other Member States in accordance with Article 6.

4. Where the particulars appearing in the information document for vehicle approval have changed, the manufacturer shall issue revised pages to the Approval Authority showing clearly the nature of the change and the date of reissue. Only where the changes made to the information document necessitate the amendment of one or more of the entries given in the Certificate of Conformity in Annex IV (except items 19.1 and 45 to 51 inclusive), shall the reference number on the information document be changed.

5. Where a type-approval certificate ceases to have effect as a result of final cessation of production of the type of vehicle which has been approved of or of the system or of the separate technical unit or component which has been type-approved, the competent authorities in the Member State which have carried out that type-approval shall inform the competent authorities in the other Member States within one month.

**Article 10**

1. If the Member State which has conducted type-approval finds that vehicles, systems, separate technical units or components do not conform to the approved type, it shall take the necessary measures to ensure that the production of any item that has been type-approved is again in conformity. The competent authorities in that Member State shall inform the authorities in the other Member States of the measures taken which may, where necessary, extend to the withdrawal of type-approval.

2. If a Member State finds that vehicles, systems, separate technical units or components do not conform to the approved type, it may request the Member State which has conducted the type-approval to verify the irregularities found. Any Member State which has conducted type-approval shall conduct the necessary check within six months following the date of receipt of that request. Should a failure to conform be established, the competent authorities in the Member State which has conducted type-approval shall take the measures set out in paragraph 1.

3. The competent authorities in the Member States shall inform each other, within one month, of the withdrawal of any type-approval granted and of the reasons for such measure.

4. If the Member State which has granted type-approval disputes the failure to conform notified to it, the Member States involved shall endeavour to resolve the matter. The Commission shall be kept informed and, where necessary, shall hold appropriate consultations in order to reach a settlement.

**Article 11**

Acting by a qualified majority on a proposal from the Commission, the Council may acknowledge equivalence between the conditions or provisions for type-approval of vehicles, systems, separate technical units and components established by this Directive together with the separate directives, and the procedures established by international regulations or regulations of non-member countries in the framework of multilateral agreements or bilateral agreements between the Community and non-member countries.
Article 12

If a Member State finds that vehicles, systems, separate technical units or components constitute a road safety hazard, even though they are of an approved type, it may, for a maximum period of six months, prohibit on its territory the sale, entry into service or use thereof. It shall forthwith inform the other Member States and the Commission, giving reasons for its decision.

Article 13

Any decision concerning the refusal or withdrawal of type-approval, a ban on the sale or use of a vehicle, separate technical unit or component taken pursuant to the provisions adopted in implementation of this Directive shall state in detail the reasons on which it is based. It shall be notified to the party concerned, who shall, at the same time, be informed of the remedies available under the laws in force in the Member States and of the time limits allowed for the exercise of such remedies.

Article 14

1. Member States shall notify the Commission and the other Member States of the names and addresses of:

(a) the type-approval authorities and, if applicable, the disciplines for which the authorities are responsible;

(b) the technical services which they have approved, specifying for which test procedures each of these services has been approved. The notified services must satisfy the harmonised standards on the operation of testing laboratories (EN 45001) subject to the following provisos:

(i) a manufacturer may not be approved as a technical service except where the separate directive makes express provisions for doing so;

(ii) for the purpose of this Directive it is not considered exceptional for a technical service to use equipment from an outside source, subject to the agreement of the approval authority.

2. A notified service shall be presumed to satisfy the harmonised standard but, where appropriate, the Commission may ask Member States to provide supporting evidence.

Non-member country services may not be notified as approved technical services other than in the framework of bilateral agreements or multilateral agreements between the Community and non-member countries.

Chapter III

Conditions Attached to Free Movement, Provisional Arrangements, Exemptions and Alternative Procedures

Article 15

1. Member States shall not prohibit the placing on the market, sale, entry into service or use of new vehicles complying with this Directive. Only vehicles complying with this Directive may be presented for initial registration.

2. Member States shall not prohibit the placing on the market, sale or use of new separate technical units or new components complying with this Directive. Only separate technical units and components complying with this Directive may be placed on the market and sold for the first time for use in the Member States.

3. By way of derogation from paragraphs 1 and 2:

(a) Member States may exempt vehicles, systems, separate technical units and components intended:

(i) either for production in small series of up to a maximum of 200 units a year per type of vehicle, per system, per component or per separate technical unit,

(ii) or for the armed forces, law enforcement agencies, civil defence services, fire brigades or public-works bodies, from compliance with any of the requirements of the separate directives.

The other Member States shall be informed of these exemptions within one month of their being granted. Within three months these Member States shall decide whether they accept the type-approval for vehicles to be registered within their territory. The certificate of such type-approval may not bear the heading ‘EC type-approval certificate’;

(b) type-approval certificates issued at national level before 17 June 1999 shall remain valid within the Member States issuing them for a period of four years from the date on which national laws are required to comply with the relevant directives.

The same period is also extended to types of vehicles, systems, components or technical entities conforming to national requirements of Member States applying other legislative systems than those for type-approval in force before the implementation of the relevant directives.
Vehicles covered by the latter exemption may be placed on the market, sold and entered into service during this period with no time limit on their use.

The placing on the market, sale and use of systems, separate technical units and components for these vehicles shall carry no time limit.

4. This Directive shall not affect the right of the Member States to lay down, in accordance with the Treaty, the requirements which they consider necessary to ensure the protection of users during the use of the vehicles in question, provided that this does not entail modification to the vehicles.

Article 16

1. By way of derogation from Article 15(1) and (2), and within the limits set out in Annex VIII, Member States may, for a limited period, register and permit the sale or entry into service of new vehicles conforming to a type of vehicle whose type-approval is no longer valid. This option shall be limited to a period of 12 months as from the date on which the type-approval lost its validity.

The first subparagraph shall apply only to vehicles which were in the territory of the Community and were accompanied by a valid certificate of conformity which had been issued when the type-approval of the vehicle in question was still valid, but which had not been registered or put into service before the said type-approval lost its validity.

2. Before paragraph 1 may be applied to one or more types of a given category, the manufacturer shall submit a request to the competent authority of each Member State concerned by the entry into service of such types of vehicle. The request shall specify the technical and/or economic reasons justifying it.

Within three months such Member States shall decide whether, and for how many units, they will accept the vehicle type concerned for registration in their territory. Each Member State concerned by the entry into service of such types of vehicle shall be responsible for ensuring that the manufacturer complies with the provisions of Annex VIII. Member States shall send the Commission every year a list of exemptions granted.

3. As regards vehicles, components or separate technical units incorporating technologies or concepts which cannot, due to their specific nature, comply with one or more of the requirements of one or more of the separate directives, point (c) of Article 8(2) of Directive 70/156/EEC shall apply.

CHAPTER IV

PROCEDURE FOR ADAPTATION TO TECHNICAL PROGRESS

Article 17

Any amendments needed for the purposes of adapting to technical progress the Annexes to this Directive or the provisions of the separate directives referred to in Annex I shall be adopted in accordance with the procedure set out in Article 18(2).

Article 18

1. The Commission shall be assisted by the Committee for Adaptation to Technical Progress, set up by Article 13 of Directive 70/156/EEC (hereinafter referred to as ‘the Committee’).

2. Where reference is made to this paragraph, Articles 5 and 7 of Decision 1999/468/EC shall apply, having regard to the provisions of Article 8 thereof.

The period laid down in Article 5(6) of Decision 1999/468/EC is set at three months.

3. The Committee shall adopt its rules of procedure.

CHAPTER V

FINAL PROVISIONS

Article 19

Council Directive 92/61/EEC shall be repealed with effect from . . . (*). References made to Directive 92/61/EEC shall be construed as references to this Directive and read according to the correlation table in Annex IX.

Article 20

1. Member States shall bring into force before . . . (**) the laws, regulations and administrative provisions necessary to comply with this Directive. They shall forthwith inform the Commission thereof.

When Member States adopt these measures, they shall contain a reference to this Directive or be accompanied by such reference on the occasion of their official publication. Methods of making such reference shall be laid down by Member States.

2. Member States shall apply the provisions referred to in paragraph 1, first subparagraph, as from . . . (*). However, at the request of the manufacturer the previous model of the certificate of conformity may still be used for 12 months thereafter.

(*) Eighteen months after the date of entry into force of this Directive.
(**) Twelve months after the date of entry into force of this Directive.
3. From . . . (*) Member States shall not prohibit the first entry into service of vehicles complying with this Directive.

4. Member States shall communicate to the Commission the texts of the main provisions of national law which they adopt in the field covered by this Directive.

**Article 21**

This Directive shall not invalidate any approvals granted before . . . (**), nor prevent extension of such approvals under the terms of the Directive under which they were originally granted. However, as from (***) certificates of conformity issued by the manufacturer shall comply with the model specified in Annex IV.

**Article 22**

Pending the harmonisation of registration and taxation systems in the Member States in relation to vehicles covered by this Directive, Member States may use national code systems in order to facilitate registration and taxation in their territory. Member States may also request that the Certificate of Conformity be supplemented by the national code number.

**Article 23**

This Directive shall enter into force on the day of its publication in the *Official Journal of the European Communities*.

**Article 24**

This Directive is addressed to the Member States.

Done at . . .

*For the European Parliament*  
*For the Council*

*The President*  
*The President*
ANNEX I

LIST OF REQUIREMENTS FOR THE PURPOSE OF VEHICLE TYPE-APPROVAL

The vehicle components and characteristics on the exhaustive list below are followed by ‘CONF’ if their conformity with the manufacturer's data has to be checked or by ‘SD’ if their conformity with requirements laid down in Community legislation has to be checked.

(As appropriate, taking account of the scope and latest amendment to each of the separate Directives listed below)

(*) In the case of twin-propulsion vehicles, if the two systems of propulsion are such that the vehicle falls within the definition either of a moped or of a motorcycle, motor tricycle or quadricycle, the latter definitions shall apply to it.

(**) Electrically-propelled vehicles are not subject to the requirements relating to this heading. This does not apply to twin-propulsion vehicles in which one of the systems of propulsion is electric and the other thermic.

Note: The separate directives will lay down specific requirements for low-performance mopeds, i.e. mopeds with pedals, with an auxiliary engine of power not exceeding 1 kW and a maximum design speed not exceeding 25 km/h. These specific characteristics will apply in particular to the components and characteristics covered by heading Nos 18, 19, 29, 32, 33, 34, 41, 43 and 46 of this Annex.
ANNEX II

INFORMATION DOCUMENT (*)

(model)

All information documents in this Directive and in separate directives must consist only of extracts from and adhere to the numbering system of this total list.

Part I

The following information on the vehicle to be type-approved and the systems, separate technical units or components to be type-approved must be supplied in triplicate and be accompanied by a list of contents. All drawings must be sufficiently detailed and presented on an appropriate scale on A4 format or be folded to that dimension. Photographs too must be sufficiently detailed. Where functions are controlled by microprocessors appropriate information concerning performance should be provided. The information document must have a reference number supplied by the applicant.

A. INFORMATION RELATING JOINTLY TO MOPEDS, MOTOR CYCLES, MOTOR TRICYCLES AND QUADRICYCLES

0. General

0.1. Make: ............................................................................................................................................

0.2. Type (state any possible variants and versions; each variant and each version must be identified by a code consisting of numbers or a combination of letters and numbers):

0.2.1. Commercial name (where applicable): .........................................................................................

0.3. Means of type identification if stated on vehicle (†): .................................................................

0.3.1. Location of that means of identification: .....................................................................................

0.4. Vehicle category (†): ....................................................................................................................

0.5. Name and address of manufacturer: ..............................................................................................

0.5.1. Name(s) and address(es) of assembly plants: ...........................................................................

0.6. Name and address of manufacturer’s authorised representative, if any: ......................................

0.7. Location and method of affixing statutory inscriptions to the chassis: ........................................

0.7.1. The serial numbering of the type begins with No: .....................................................................

0.8. Position and method of affixing the component type-approval mark for components and separate technical units: ...........................................................................................................

1. General arrangement of the vehicle

1.1. Photos and/or drawings of a typical vehicle: ...................................................................................

1.2. Dimensional drawing of the complete vehicle: ............................................................................

1.2.1. Wheelbase: ..............................................................................................................................

1.3. Number of axles and wheels (where appropriate, number of crawler tracks or belts): .............

1.4. Position and arrangement of engine: .............................................................................................

1.5. Number of seating positions: .........................................................................................................

1.6. Hand of drive — left or right (†)

1.6.1. Vehicle is equipped to be driven in right hand or left-hand rule of the road traffic (†) ............
2. Masses (in kg) (*)

2.1. Mass of vehicle in running order (†); ........................................................................................................

2.1.1. Distribution of that mass between the axles: ............................................................................................

2.1.2. Mass of vehicle in running order (†), together with rider: ...........................................................................

2.2. Distribution of that mass between the axles: ...................................................................................................

2.3. Maximum technically permissible mass declared by the manufacturer: .........................................................

2.3.1. Division of that mass between the axles: ......................................................................................................

2.3.2. Maximum technically permissible mass on each of the axles: .................................................................

2.4. Maximum hill-starting ability at the maximum technically permissible mass declared by the manufacturer: 
........................................................................................................................................................................

2.5. Maximum towable mass (where applicable): ...................................................................................................

2.6. Maximum mass of the combination: ..................................................................................................................

3. Engine (†)

3.0. Manufacturer: ................................................................................................................................................

3.1. Make: .............................................................................................................................................................

3.1.1. Type (stated on the engine, or other means of identification): ....................................................................

3.1.2. Location of engine number (if applicable): ..................................................................................................

3.2. Spark or compression-ignition engine (†); ........................................................................................................

3.2.1. Specific characteristics of the engine: ..........................................................................................................  

3.2.1.1. Operating cycle (four or two stroke, spark or compression ignition) (†): ................................................

3.2.1.2. Number, arrangement and firing order of cylinders: ..............................................................................

3.2.1.2.1. Bore: ........................................ mm (†)

3.2.1.2.2. Stroke: .......................................... mm (†)

3.2.1.3. Cylinder capacity: ...................... cm³ (†)

3.2.1.4. Compression ratio: (†): .............................................................................................................................

3.2.1.5. Drawings of cylinder head, piston(s), piston rings and cylinder(s): ......................................................

3.2.1.6. Idling speed (†): .............................. min⁻¹

3.2.1.7. Maximum net power output: .................... kW at ................................. min⁻¹

3.2.1.8. Net maximum torque: ......................... Nm at ................................. min⁻¹

3.2.2. Fuel: diesel/petrol/mixture/LPG/other (†)

3.2.3. Fuel tank

3.2.3.1. Maximum capacity (†): ............................................................................................................................

3.2.3.2. Drawing of tank with indication of material used: ..................................................................................

3.2.3.3. Diagram clearly indicating the position of the tank on the vehicle: ......................................................

3.2.3.4. Approval number of the fuel tank fitted: .............................................................................................
3.2.4. Fuel supply

3.2.4.1. Via carburettor(s): yes/no (?)

3.2.4.1.1. Make(s): ......................................................................................................................

3.2.4.1.2. Type(s): ........................................................................................................................

3.2.4.1.3. Number fitted: ..............................................................................................................

3.2.4.1.4. Settings (?)

i.e. of:

3.2.4.1.4.1. Diffusers: .....................................................................................................................

3.2.4.1.4.2. Level in float chamber: ..............................................................................................

3.2.4.1.4.3. Mass of float: ...............................................................................................................

3.2.4.1.4.4. Float needle: ..............................................................................................................

or

3.2.4.1.4.5. Fuel curve as a function of the air flow and setting required in order to maintain that curve: ........

3.2.4.1.5. Cold-starting system: manual/automatic (?)

3.2.4.1.5.1. Operating principle(s): ............................................................................................

3.2.4.2. By fuel injection (solely in the case of compression ignition): yes/no (?)

3.2.4.2.1. Description of system: ....................................................................................................

3.2.4.2.2. Operating principle: direct/indirect/turbulence chamber injection (?)

3.2.4.2.3. Injection pump
either:

3.2.4.2.3.1. Make(s): ......................................................................................................................

3.2.4.2.3.2. Type(s): ......................................................................................................................

or

3.2.4.2.3.3. Maximum fuel flow rate (?) mm\(^3\) per stroke or cycle (?) at a pump rotational speed of:\n
3.2.4.2.3.4. Injection advance (?)

3.2.4.2.3.5. Injection advance curve (?)

3.2.4.2.3.6. Calibration procedure: test bench/engine (?)

3.2.4.2.4. Regulator

3.2.4.2.4.1. Type: ...........................................................................................................................

3.2.4.2.4.2. Cut-off point

3.2.4.2.4.2.1. Cut-off point under load: mm\(^3\) per minute

3.2.4.2.4.2.2. Cut-off point under no load: mm\(^3\) per minute

3.2.4.2.4.3. Idling speed: mm\(^3\) per minute
3.2.4.2.5. Injection pipework

3.2.4.2.5.1. Length: .................. mm

3.2.4.2.5.2. Internal diameter: .................. mm

3.2.4.2.6. Injector(s)

either

3.2.4.2.6.1. Make(s): .................................................................

3.2.4.2.6.2. Type(s): .................................................................

or

3.2.4.2.6.3. Opening pressure (?): ...................... kPa or characteristic diagram (?): .................

3.2.4.2.7. Cold starting system (if applicable)

either:

3.2.4.2.7.1. Make(s): .................................................................

3.2.4.2.7.2. Type(s): .................................................................

or

3.2.4.2.7.3. Description: .................................................................

3.2.4.2.8. Secondary starting device (if applicable)

either:

3.2.4.2.8.1. Make(s): .................................................................

3.2.4.2.8.2. Type(s): .................................................................

or

3.2.4.2.8.3. Description of system: .................................................................

3.2.4.3. By fuel injection (solely in the case of spark-ignition): yes/no (?)

either:

3.2.4.3.1. Description of system: .................................................................

3.2.4.3.2. Operating principle: injection into induction manifold (single/multiple point) (?); direct injection/other (state which) (?):

or

3.2.4.3.2.1. Make(s) of the injection pump: .................................................................

3.2.4.3.2.2. Type(s) of the injection pump: .................................................................

3.2.4.3.3. Injectors: opening pressure (?): ...................... kPa

or characteristic diagram (?): .................................................................

3.2.4.3.4. Injection advance: .................................................................

3.2.4.3.5. Cold starting system

3.2.4.3.5.1. Operating principle(s): .................................................................

3.2.4.3.5.2. Operating/setting limits (?): .................................................................
3.2.4.4. Fuel pump: yes/no

3.2.5. Electrical equipment

3.2.5.1. Nominal voltage: ___________ V, positive/negative earth

3.2.5.2. Generator

3.2.5.2.1. Type: ____________________________________________________________

3.2.5.2.2. Nominal power: ___________ W

3.2.6. Ignition

3.2.6.1. Make(s): ___________________________________________________________

3.2.6.2. Type(s): ___________________________________________________________

3.2.6.3. Operating principle: ______________________________________________

3.2.6.4. Ignition advance curve or operating set point (?): ______________________

3.2.6.5. Static timing (?); ___________ before TDC

3.2.6.6. Points gap (?); ___________ mm

3.2.6.7. Dwell angle (?); ___________ degrees

3.2.6.8. Anti-radio interference system________________________________________

3.2.6.8.1. Terminology and drawing of anti-radio interference equipment: _______

3.2.6.8.2. Indication of the nominal DC resistance value and, in the case of resistive ignition leads, statement of nominal resistance per metre: _________________________________

3.2.7. Cooling system (liquid/air)

3.2.7.1. Nominal setting for the engine-temperature control device: _______________

3.2.7.2. Liquid

3.2.7.2.1. Nature of liquid: ___________________________________________________

3.2.7.2.2. Circulating pump(s): yes/no

3.2.7.3. Air

3.2.7.3.1. Blower: yes/no

3.2.8. Induction system

3.2.8.1. Supercharging: yes/no

3.2.8.1.1. Make(s): __________________________________________________________

3.2.8.1.2. Type(s): __________________________________________________________

3.2.8.1.3. Description of system (example: maximum boost pressure ___________ kPa, waste gate (where appropriate)): ____________________________________________

3.2.8.2. Intercooler: with/without

3.2.8.3. Description and drawings of induction pipework and accessories (plenum chamber, heating device, additional air intakes, etc.): _________________________________

3.2.8.3.1. Description of induction manifold (with drawings and/or photos): ________________
3.2.8.3.2. Air filter, drawings: 

or

3.2.8.3.2.1. Make(s): 

3.2.8.3.2.2. Type(s): 

3.2.8.3.3. Inlet silencer, drawings: 

or

3.2.8.3.3.1. Make(s): 

3.2.8.3.3.2. Type(s): 

3.2.9. Exhaust system

3.2.9.1. Drawing of complete exhaust system: 

3.2.10. Minimum cross-section of the inlet and exhaust ports: 

3.2.11. Induction system or equivalent data

3.2.11.1. Maximum, valve lift, opening and closing angles in relation to the dead centres, or data concerning the settings of other possible systems: 

3.2.11.2. Reference and/or setting ranges (i): 

3.2.12. Anti-air pollution measures adopted

3.2.12.1. Crankcase-gas recycling device, solely in the case of four-stroke engines (description and drawings): 

3.2.12.2. Additional anti-pollution devices (where present and not included under another heading): 

3.2.12.2.1. Description and/or drawings: 

3.2.13. Location of the coefficient of absorption symbol (compression-ignition engines only): 

3.3. Electric traction motor

3.3.1. Type (winding, excitation): 

3.3.1.1. Maximum continuous rated power (h): 

3.3.1.2. Operating voltage: Volts 

3.3.2. Battery

3.3.2.1. Number of cells: 

3.3.2.2. Mass: kg 

3.3.2.3. Capacity: Ah (amp/hours) 

3.3.2.4. Location: 

3.4. Other motors or combinations of motors (specific information concerning the parts of those motors): 

3.5. Cooling system temperatures permitted by the manufacturer

3.5.1. Liquid cooling

3.5.1.1. Maximum temperature at outlet: °C
3.5.2. Air cooling

3.5.2.1. Reference point: .................................................................

3.5.2.2. Maximum temperature at reference point: ................. °C

3.6. Lubrication system

3.6.1. Description of system: .................................................................

3.6.1.1. Location of oil reservoir (if any): ...................................................

3.6.1.2. Feed system (pump/injection into induction system/mixed with the fuel, etc.) (*): ...................................................

3.6.2. Lubricant mixed with the fuel

3.6.2.1. Percentage: .............................................................................

3.6.3. Oil cooler: yes/no (*)

3.6.3.1. Drawings: ...............................................................................

3.6.3.1.1. Make(s): ..............................................................................

3.6.3.1.2. Type(s): ..............................................................................

4. Transmission (*)

4.1. Diagram of transmission system: ...................................................

4.2. Type (mechanical, hydraulic, electrical, etc.): ........................................

4.3. Clutch (type): .............................................................................

4.4. Gearbox

4.4.1. Type: automatic/manual (*)

4.4.2. Method of selection: by hand/foot (*)

4.5. Gear ratios

N = gear ratio.
R1 = primary ratio (ratio of engine speed to rotational speed of primary gearbox shaft).
R2 = secondary ratio (ratio of rotational speed of primary shaft to rotational speed of secondary shaft in gearbox).
R3 = final drive ratio (ratio of rotational speed of gearbox output shaft to rotational speed of driven wheels).
R4 = overall ratio.

4.5.1. Brief description of the electrical and/or electronic components used in the transmission: .................

4.6. Maximum speed of vehicle and gear in which it is reached (in km/h): 

..............................................................................................................................................
4.7. Speedometer

4.7.1. Make(s): ..............................................................................................................

4.7.2. Type(s): ..............................................................................................................

4.7.3. Photographs and/or drawings of the complete system

4.7.4. Speed range displayed: ..........................................................................................

4.7.5. Tolerance of the measuring mechanism of the speedometer: .................................

4.7.6. Technical constant of the speedometer: ..................................................................

4.7.7. Method of operation and description of drive mechanism: ......................................

4.7.8. Overall transmission ratio of the drive mechanism: ..............................................

5. Suspension

5.1. Drawing of suspension arrangement: .........................................................................

5.1.1. Brief description of the electrical and/or electronic components used in the suspension: ..............................................................................................................................

5.2. Tyres (category, dimensions and maximum loading) and rims (standard type): ...........

5.2.1. Nominal rolling circumference: ..............................................................................

5.2.2. Tyre pressures recommended by the manufacturer: kPa

5.2.3. Tyre/wheel combinations: ......................................................................................

5.2.4. Minimum-speed category symbol compatible with the theoretical maximum design speed of the vehicle:

5.2.5. Minimum load-capacity index with the maximum load on each tyre: ......................

5.2.6. Categories of use compatible for the vehicle: ..........................................................

6. Steering

6.1. Steering gear and control

6.1.1. Type of gear: ..........................................................................................................

6.1.2. Brief description of the electrical and/or electronic components used in the steering system: ......................................................................................................................

7. Braking

7.1. Diagram of braking devices: ........................................................................................

7.2. Front and rear brakes, disc and/or drum (1)

7.2.1. Make(s): ..............................................................................................................

7.2.2. Type(s): ..............................................................................................................

7.3. Drawing of parts of the brake system

7.3.1. Shoes and/or pads (1): ..........................................................................................

7.3.2. Linings and/or pads (Indicate make, grade of material or identification mark) (1): ........

7.3.3. Brake levers and/or pedals (1): ..............................................................................

7.3.4. Hydraulic reservoirs (where applicable): ..............................................................
7.4. Other devices (where applicable): drawing and description: ..............................................................
.................................................................................................................................

7.5. Brief description of the electrical and/or electronic components used in the braking system: ..............
.................................................................................................................................

8. Lighting and light-signalling devices

8.1. List of all devices (mentioning the number, make(s), model, component type-approval mark(s), the
maximum intensity of the main-beam headlamps, colour, the corresponding tell-tale): ...........................
.................................................................................................................................

8.2. Diagram showing the location of the lighting and light-signalling devices: ...........................................

8.3. Hazard warning lamps (where fitted): ................................................................................................

8.4. Additional requirements relating to special vehicles: ........................................................................

8.5. Brief description of the electrical and/or electronic components used in the lighting system and in the
light signalling system: .................................................................................................
.................................................................................................................................

9. Equipment

9.1. Coupling devices (where applicable)

9.1.1. Type: hook/ring/other (†)

9.1.2. Photograph and/or drawings showing the position and the construction of the coupling devices: .......

9.2. Arrangement and identification of controls, tell-tales and indicators: ...................................................
.................................................................................................................................

9.2.1. Photographs and/or drawings of the arrangement of the symbols, controls, tell-tales and indicators: ...

9.3. Statutory inscriptions

9.3.1. Photographs and/or drawings showing the location of the statutory inscriptions and the chassis number:

9.3.2. Photographs and/or drawings showing the official part of the inscription (with statement of dimensions):

9.3.3. Photographs and/or drawings of the chassis number (with statement of dimensions): ........................
.................................................................................................................................

9.4. Device(s) to protect against unauthorised use ....................................................................................

9.4.1. Type of device(s):

9.4.2. Summary description of device(s) used: ...........................................................................................

9.5. Audible warning device(s)

9.5.1. Summary description of device(s) used and their purpose: ..............................................................
.................................................................................................................................

9.5.2. Make(s): ......................................................................................................................................

9.5.3. Type(s): ......................................................................................................................................

9.5.4. Type-approval mark: ....................................................................................................................

9.5.5. Drawing(s) showing the location of the audible warning device(s) in relation to the structure of the
vehicle: .....................................................................................................................................

9.5.6. Details of the method of attachment, including the part of the vehicle structure to which the audible
warning device(s) is (are) attached: .........................................................................................

9.6. Location of rear registration plate (indicate variants where necessary; drawings may be used as
appropriate): ........................................................................................................................

9.6.1. Inclination of plane in relation to the vertical: ..................................................................................
B. INFORMATION RELATING SOLELY TO TWO-WHEEL MOPEDS AND MOTORCYCLES

1. Equipment

1.1. Rear-view mirror(s) (please provide the following information for each rear-view mirror)

1.1.1. Make: ............................................................................................................................

1.1.2. Component type-approval mark: ....................................................................................

1.1.3. Variant: ..........................................................................................................................

1.1.4. Drawing(s) showing the location of the rear-view mirror(s) in relation to the structure of the vehicle:

1.1.5. Precise information concerning the type of attachment, including that part of the vehicle structure to which the rear-view mirror is attached: ...........................................................................................

1.2. Stand

1.2.1. Type: central and/or side (?)

1.2.2. Drawing showing the location of the stand(s) in relation to the structure of the vehicle: .................

1.3. Attachments for motorcycle sidecars (where applicable)

1.3.1. Photographs and/or drawings showing the location and the construction: ..........................

1.4. Hand-hold for a passenger

1.4.1. Type: strap and/or handle (?)

1.4.2. Photographs and/or drawings showing the location: ............................................................

1.5. For mopeds fitted with pedals and, if Directive 97/24/EC, Chapter 3, Annex I, point 3.5 applies, description of the measures taken in order to ensure safety:

..................................................................................................................................................

1.6. Design and position of the label referred to in Directive 97/24/EC, Chapter 7: ..............................

C. INFORMATION RELATING SOLELY TO THREE-WHEEL MOPEDS, MOTOR TRICYCLES AND QUADRICYCLES

1. Dimensions and masses (in mm and kg) (where necessary, refer to drawings)

1.1. Dimensions to be complied with when building unbodied chassis

1.1.1. Length: ...............................................................................................................................

1.1.2. Width: ................................................................................................................................

1.1.3. Unladen height: ..................................................................................................................

1.1.4. Front overhang: ..................................................................................................................

1.1.5. Rear overhang: ..................................................................................................................

1.1.6. Limit position for centre of gravity of bodied vehicle: ............................................................

..................................................................................................................................................

1.2. Masses (?)

1.2.1. Maximum payload declared by manufacturer: ........................................................................

2. Equipment

2.1. Bodywork

2.1.1. Nature of bodywork: ...........................................................................................................

2.1.2. General dimensional arrangement drawing of inside: .................................................................

2.1.3. General dimensional arrangement drawing of outside: ..............................................................

2.1.4. Materials and methods of manufacture: ......................................................................................

2.1.5. Passenger doors, locks and hinges: .........................................................................................

2.1.6. Configuration, dimensions, direction and maximum opening angle of doors: ....................

2.1.7. Drawing of locks and hinges and their location in the doors: ...................................................

2.1.8. Technical description of locks and hinges: .............................................................................

2.2. Windscreen and other glazing

2.2.1. Windscreen

2.2.1.1. Materials used: ......................................................................................................................

2.2.2. Other glazing

2.2.2.1. Materials used: ......................................................................................................................

2.3. Windscreen wiper(s)

2.3.1. Detailed technical description (with photographs or drawings): ........................................

2.4. Windscreen washer(s)

2.4.1. Detailed technical description (with photographs or drawings): ........................................

2.5. Defrosting and demisting

2.5.1. Detailed technical description (with photographs or drawings): ........................................

2.6. Rear-view mirror(s) (please give the following information for each rear-view mirror)

2.6.1. Make: .....................................................................................................................................

2.6.2. Type-approval mark: .............................................................................................................

2.6.3. Variant: ...................................................................................................................................

2.6.4. Drawing(s) showing the location of the rear-view mirror(s) in relation to the structure of the vehicle:

2.6.5. Detailed information on the method of attachment, including that part of the structure of the vehicle to which the rear-view mirror is attached: ..............................................................

2.7. Seats

2.7.1. Number: ..................................................................................................................................

2.7.2. Location: ..................................................................................................................................

2.7.3. Coordinates or drawing of the R point (l)

2.7.3.1. Driving seat: .......................................................................................................................  

2.7.3.2. Other seats: .........................................................................................................................  

2.7.4. Intended seat-back inclination

2.7.4.1. Driving seat: .......................................................................................................................  

2.7.4.2. Other seats: .........................................................................................................................  

2.7.5. Seat adjustment range, where appropriate

2.7.5.1. Driving seat: 

2.7.5.2. Other seats: 

2.8. Passenger-compartment heating system (where applicable)

2.8.1. Summary description of type of vehicle in respect of the heating system if this uses heat from the liquid engine coolant: 

2.8.2. Detailed description of the type of the vehicle in respect of the heating system if this uses the cooling air or exhaust gases as a heat source, including: 

2.8.2.1. An overall drawing of the heating system giving its location on the vehicle (and the arrangement of the sound damping devices (including the position of the heat exchange points)): 

2.8.2.2. An overall drawing of the heat exchanger used in systems utilising the heat from the exhaust gases, or of the parts where that exchange takes place (in the case of heating systems using the heat provided by the engine cooling air): 

2.8.2.3. A sectional drawing of the heat exchanger or parts where heat exchange takes place, together with a statement of the wall thickness, of the materials used and the characteristics of their surface: 

2.8.2.4. Specifications regarding the method of manufacture and technical data relating to other major components of the heating system, such as the fan: 

2.9. Safety belts

2.9.1. Number and location of safety belts, together with a reference to the seats where that type of equipment may be installed:

(*) 'A' for a three-point belt.
'B' for a lap belt.
'S' for special types of belt (in this case provide specific information on the nature of these types under observation).
'Ate', 'Bte' or 'Stc' for a belt incorporating an inertia reel.
'Ares', 'Bre' or 'Sres' for a belt equipped with an inertia reel and an energy-absorption device on at least one anchorage.

2.10.5. Description of a specific type of belt, one anchorage of which is attached to the seat back-rest or incorporates an energy-dissipation device: ............................................................................................................
Notes

(1) Delete where applicable.

(2) State tolerances.

(3) Where a device has been component type-approved, the description may be replaced by a reference to that component type-approval. Likewise, no description is needed where a component’s structure is clear from the diagrams or drawings attached to the certificate. State the numbers of the corresponding Annexes to each heading where photographs and drawings must be attached.

(4) Where used, means of identification may appear only on vehicles, separate technical units or components falling within the scope of the separate directive governing components type-approval.

(5) Where the method of type identification includes characters which do not relate to the description of the types of vehicle/separate technical unit/component referred to in this information document, those characters are replaced in the documentation, by the sign ‘?’ (example: ABC?123?).

(6) Classification in accordance with the following categories as referred to in Article 1:
- two-wheel moped (L1e),
- three-wheel moped (L2e),
- motor-cycle (L3e),
- motor-cycle with side-car (L4e),
- motor tricycle (L5e),
- light quadricycles (L6e),
- quadricycles other than light quadricycles as referred to in Article 1(3b) (L7e).

(7) 1. Unladen mass: mass of vehicle ready for normal use and equipped as follows:
- additional equipment required solely for the normal use under consideration,
- complete electrical equipment, including the lighting and light-signalling devices supplied by the manufacturer,
- instruments and devices required by the laws under which the unladen mass of the vehicle has been measured,
- the appropriate amounts of liquids in order to ensure the proper operation of all parts of the vehicle.

NB: the fuel and the fuel/oil mixture are not included in the measurement, but components such as the battery acid, the hydraulic fluid, the coolant and the engine oil must be included.

2. Mass in running order: unladen mass to which the mass of the following components is added:
- fuel: tank filled to at least 90 % of the capacity stated by the manufacturer,
- additional equipment normally supplied by the manufacturer in addition to that need for normal operation (tool kit, luggage carrier, windscreen, protective equipment, etc.).

NB: in the case of a vehicle operating with a fuel/oil mixture:
(a) when the fuel and oil are pre-mixed the word ‘fuel’ must be interpreted as meaning a pre-mixture of fuel and oil of this type;
(b) when the fuel and oil are put in separately the word ‘fuel’ must be interpreted as meaning only the petrol. In this case, the oil is already included in the measurement of the unladen mass.

3. Technically permissible maximum mass: mass calculated by the manufacturer for specific operating conditions, taking account of factors such as the strength of the materials, loading capacity of the tyres, etc.

4. Maximum payload declared by the manufacturer: load obtained by subtracting the mass defined in section 2, with rider, from the mass defined in section 3.

5. The mass of the rider is taken to be a round figure of 75 kg.

(8) Where unconventional engines and systems are fitted, information equivalent to that referred to under this heading must be supplied by their manufacturer.

(9) This figure should be to the nearest tenth of a millimetre.

(10) This value should be calculated with \( \pi = 3.1416 \) to the nearest cm\(^2\).

(11) The information requested should be supplied for a possible variant.

(12) A tolerance of 5 % is permitted provided that the limit values pursuant to Article 1(5) are not exceeded.

(13) The ‘R point’ or ‘seat reference point’ means the reference point indicated by the manufacturer, which:
- has specific coordinates in relation to the structure of the vehicle,
- corresponds to the theoretical position of the point of rotation of the trunk/heights (H point) for the lowest normal driving or use position and the nearestmost position stated by the manufacturer of the vehicle for each of the seats provided,
- may be taken as a reference by the competent authorities, where they so wish, for each of the seats other than the front seats where the ‘H point’ cannot be determined by means of the ‘three-dimensional reference system’ or the procedures for determination of the ‘H point’.

(14) Pending the adaptation of the relevant directive, this figure shall be stated in accordance with the International Standard CEE/IC 60034-1 (1992, 1995-06).
The following information shall be supplied on the vehicle to be type approved with regard to existing system, separate technical unit or component approvals (*):

(*) Information is not required in respect of systems, separate technical units or components which are to be included in the examination or testing for the granting of whole vehicle type approval.
ANNEX III

MODEL

(maximum format: A4 (210 x 297 mm))

EC TYPE-APPROVAL CERTIFICATE

Communication concerning:
— type-approval (1)
— extension of type-approval (1)
— refusal of type-approval (1)
— withdrawal of type-approval (1)

of a type of vehicle with regard to Directive 2001/.../EC (1)

Type-approval number: 

Reason for extension: 

0. GENERAL

0.1. Make(s) (trade name of the manufacturer): 

0.2. Type: 

0.2.1. Commercial name(s): 

0.3. Means of identification of type, if marked on the vehicle: 

0.3.1. Location of that marking: 

0.4. Category: (2) 

0.5. Name and address of the vehicle manufacturer: 

0.5.1. Name(s) and address(es) of assembly plant(s): 

The undersigned hereby certifies the accuracy of the manufacturer's description in the attached information document of the vehicle type described above, for which one or several representative samples, selected by the competent approval authorities, has (have) been submitted as prototype(s) of the vehicle type and that the attached test results are applicable to the vehicle type.

The vehicle type meets/does not meet (1) the technical requirements of all relevant separate Directives (as last amended) listed in the table of Annex I to Directive 2001/.../EC.

The approval is granted/refused/withdrawn (1).

Place: 

Signature: 

Date: 

Attachments: Information document, Parts 1 and 2 (Annex II)

Test results (Annex VII)

Name(s) and specimen(s) of the signature of the persons authorised to sign the certificates of conformity and a statement of their position in the company

A model certificate of conformity

(1) Insert number of Directive.
(2) Delete where not applicable.
(?) According to the classification introduced in Article 1.
ANNEX IV

CERTIFICATES OF CONFORMITY

A. CERTIFICATE OF CONFORMITY ACCOMPANYING EACH VEHICLE IN THE SERIES OF THE TYPE WHICH HAS BEEN APPROVED

(model)

(maximum format: A4 (210 × 297 mm) or folded to A4 format)

EC CERTIFICATE OF CONFORMITY

Side 1

The undersigned:

..................................................................................................................................................

(full name)

hereby certifies that the following vehicle:

0.1. Make: ....................................................................................................................................

(trade name of manufacturer)

0.2. Type: ....................................................................................................................................

Variant (\(^1\)): ................................................................................................................................

Version (\(^1\)): ................................................................................................................................

0.2.1. Commercial name(s) (where appropriate): ........................................................................

0.4. Vehicle category (\(^2\)): ........................................................................................................

0.4.1. Vehicle category according to Directive 97/24/EC, chapter 7 (if applicable): A/B/C/D (\(^2\))

0.5. Name and address of the manufacturer: ................................................................................

0.6. Location of the statutory plate (\(^3\)): ....................................................................................

Vehicle identification number: ........................................................................................................

0.7. Location of the vehicle identification number on the chassis (\(^4\)): ........................................

conforms in all respects to the type described in EC type-approval

— EC type-approval number: ..........................................................................................................

— dated: ..........................................................................................................................................

The vehicle can be permanently registered without requiring any further approvals, for driving on the right/left (\(^7\)) and for using metric/imperial (\(^7\)) units for the speedometer.

.............................................................................................................................. ..................................

..................................................................................................................

(signature)  (position held)
Notes

(1) Indicate also the numerical or combined number/letter identification code. This code shall contain not more than 25 or 35 positions for a variant or version respectively.

(2) Classification in accordance with categories in Annex II footnote c.

(3) Delete where applicable.

(4) Indicate the location by following codes:
   - R: right side of the vehicle,
   - C: centre of the vehicle,
   - L: left side of the vehicle,
   - x: horizontal distance (in mm) from the frontmost axle (preceded by ‘—’ if in front of the front axle),
   - y: horizontal distance (in mm) from the longitudinal centre line of the vehicle,
   - z: distance (in mm) from the ground,

(r/o): parts need to be removed or opened to access to the marking.

   Example for a VIN plate fitted on the right side of a motorcycle headpipe, 500 mm behind the front axle, 30 mm from the centre line and 1100 mm high:
   - R, x500, y30, z1100.

   Example for a VIN plate fitted on a quadricycle, on the right side of the vehicle, 100 mm in front of the front axle, 950 mm from the longitudinal centre line of the vehicle and 700 mm high, under the bonnet:
   - R, x100, y950, z700 (r/o).

(5) Indicate the arrangement of the cylinders by following codes:
   - L: in line,
   - V: in V,
   - O: opposed-cylinder engine,
   - S: single cylinder engine.

(6) Indicate fuel type by the following codes:
   - P: petrol,
   - D: diesel,
   - M: mixture,
   - LPG: liquid petroleum gas,
   - O: other.

(7) M: manual,
   - A: automatic.

(8) For vehicles with a body:

(9) Indicate the configuration by following codes:
   - R: right side of the vehicle,
   - L: left side of the vehicle,
   - F: front side of the vehicle,
   - RE: rear side of the vehicle.

   Example for a vehicle with two left side doors and one right door:
   - 2 L, 1 R.

(10) Indicate the position by the following codes:
    - r: row number,
    - R: right side of the vehicle,
    - C: centre of the vehicle,
    - L: left side of the vehicle.

    Example for a vehicle with a first row with two front seating positions, one right, one left and a second row with three rear seating positions, one right, one centre, one left:
    - r1: 1R, r2: 1R, r3: 1C, r4: L.

(11) Number of the base Directive and latest amending Directive applicable to the approval. In the case of a Directive with two or more implementation stages, indicate also the implementation stage.
ANNEX V

NUMBERING AND MARKING

A. TYPE-APPROVAL CERTIFICATE NUMBERING SYSTEM
(Article 5(3))

1. The type-approval number shall consist of

— four sections for vehicle type-approvals and

— five sections for system, component, and separate technical unit approvals, as detailed below. In all cases, the sections shall be separated by the * character.

Section 1: the lower case letter 'e' followed by the distinguishing code (number) of the Member State issuing the type-approval:

1 for Germany; 2 for France; 3 for Italy; 4 for the Netherlands; 5 for Sweden; 6 for Belgium; 9 for Spain; 11 for the United Kingdom; 12 for Austria; 13 for Luxembourg; 17 for Finland; 18 for Denmark; 21 for Portugal; 23 for Greece; 24 for Ireland.

Section 2: the number of the base Directive.

Section 3: the number of the latest amending Directive applicable to the type-approval.

In the case of vehicle type-approvals, this means the latest Directive amending an Article (or Articles) of this Directive.

In the case of system, component and separate technical unit type-approvals, this means the latest separate Directive containing the actual provisions with which the system, component or technical unit conforms.

However, if a base Directive has not been amended, its number is retaken in section 3.

Should a Directive contain different implementation dates referring to different technical standards, an alphabetical character shall be added to specify to which standard the approval was granted.

Where system, component or separate technical unit type-approvals are possible according to chapters or sections of the same separate Directive, the number of the separate Directive shall be followed by the number of the Chapter (1), Annex (2) and Appendix (3) in order to indicate the subject of the type-approval. In all cases, these numbers shall be separated by the / character.

Section 4: a four-digit sequential number (with leading zeros as applicable) to denote the base type-approval number. The sequence shall start from 0001 for each base Directive.

Section 5: a two-digit sequential number (with leading zeros if applicable) to denote the extension. The sequence shall start from 00 for each base type-approval number.

2. In the case of EC type-approval for a whole vehicle, section 2 shall be omitted.

3. On the vehicle’s statutory plate only, Section 5 shall be omitted.

4. Example of the second type-approval granted by the Netherlands according to Directive 97/24/EC, Chapter 5, Annex II:

e4*97/24*97/24/5II*0002*00

5. Example of the third type-approval (extension 1) granted by Italy according to Directive 95/1/EC, Annex I:

e3*95/1*95/1/I*0003*01

(1) In Arabic characters.
(2) In Roman characters.
(3) In Arabic characters and capital letters where applicable.
6. Example of the ninth type-approval (extension 4) granted by the United Kingdom according to Directive 93/29/EEC as amended by Directive 2000/74/EC:
   e11*93/29*2000/74*0009*04

7. Example of the fourth vehicle type-approval (extension 2) granted by Germany according to Directive 92/61/EEC:
   e1*92/61*0004*02

8. Example of the vehicle type-approval number stamped on the vehicle’s statutory plate:
   e1*92/61*0004

B. TYPE-APPROVAL MARK

1. The type-approval mark of a component or separate technical unit consists of:

   1.1. a rectangle surrounding a lower case letter ‘e’, followed by the distinguishing number of the Member State which has issued type-approval, i.e.:
   — 1 for Germany
   — 2 for France
   — 3 for Italy
   — 4 for the Netherlands
   — 5 for Sweden
   — 6 for Belgium
   — 9 for Spain
   — 11 for the United Kingdom
   — 12 for Austria
   — 13 for Luxembourg
   — 17 for Finland
   — 18 for Denmark
   — 21 for Portugal
   — 23 for Greece
   — 24 for Ireland.

   1.2. The four-digit number from Section 4 of the type-approval number, as given on the type-approval form completed for the separate technical unit or component concerned. The number is entered below and close to the rectangle referred to in point 1.1. The figures making up the number are entered on the same side of the letter ‘e’ and face the same direction. In order to avoid any confusion with other symbols, Roman numerals must not be used in the type-approval number.

2. The type-approval mark is affixed to the separate technical unit or component in such a way as to be indelible and clearly legible, even when the separate technical unit or component is fitted to the vehicle.

3. An example of a type-approval mark is contained in the Appendix to this Annex.
Appendix

Example of a type-approval mark

Legend: The above type-approval of a component or a separate technical unit was issued by Ireland (e 24) under No 0676.
ANNEX VI

PROVISIONS RELATING TO CHECKING THE CONFORMITY OF PRODUCTION

1. In order to check that vehicles, systems, separate technical units and components are produced in such a way as to conform to the type which has been type-approved, the following provisions apply.

1.1. The holder of the type-approval certificate is obliged to:

1.1.1. ensure that there are procedures for the effective monitoring of product quality;

1.1.2. have access to the monitoring equipment necessary for checking the conformity of each type of vehicle or each type of system, separate technical unit or component which has been type-approved;

1.1.3. ensure that the data concerning test results are recorded and the attached documents are kept for a period of 12 months after the cessation of production;

1.1.4. analyse the results of each type of test in order to monitor and ensure the consistency of the characteristics of the product, with due regard for the variations permissible within industrial manufacture;

1.1.5. take steps to ensure that the tests prescribed in the relevant separate Directive are performed for each type of product;

1.1.6. take steps to ensure that any taking of samples or test-pieces which give evidence of non-conformity for the type of test under consideration is followed by a fresh taking of samples and a new test. All necessary measures must be taken to re-establish the conformity of the corresponding production.

1.2. The competent authorities, which have issued the type-approval certificate, may check at any time the methods used for checking conformity in each production unit.

1.2.1. At the time of each inspection the test and production records must be conveyed to the inspector.

1.2.2. The inspector may select at random samples to be tested in the manufacturer's laboratory. The minimum number of samples may be determined in accordance with the results of the manufacturer's own checks.

1.2.3. Where the quality level appears unsatisfactory or where it seems necessary to check the validity of tests performed in accordance with 1.2.2, the inspector must take samples which will be sent to the technical body which has performed the tests for type-approval.

1.2.4. The competent authorities may perform all the tests prescribed in the separate Directive(s) applying to the product(s) concerned.

1.2.5. The competent authorities must authorise one inspection per year. If a different number of inspections is necessary, it will be specified in each of the separate Directives. If negative results are noted during an inspection, the competent authority must ensure that all necessary measures are taken to re-establish conformity of production as soon as possible.
ANNEX VII

TEST RESULTS

(Article 5(1), first subparagraph)

(This sheet must be completed by the approval authority and be attached to the vehicle type-approval certificate)

In each case, the information must make clear to which variant and version it is applicable. One version may not have more than one result.

1. Results of the sound level tests

Number of the base Directive and latest amending Directive applicable to the approval. In the case of a Directive with two or more implementation stages, indicate also the implementation stage:

- Variant/version
- Moving dB(A)
- Stationary dB(A)
- at (min⁻¹)

2. Results of the exhaust emission tests

Number of the base Directive and latest amending Directive applicable to the approval. In the case of a Directive with two or more implementation stages, indicate also the implementation stage:

- Variant/version

2.1. Type I

- CO (g/km)
- HC (g/km) (¹)
- NOₓ (g/km) (¹)
- HC + NOₓ (g/km) (²)

2.2. Type II

- CO (g/min) (²)
- HC (g/min) (²)
- CO (% vol.) (³)

3. Compression ignition engine

- Variant/version
- Corrected value of absorption coefficient (m⁻¹)

¹ Only for motorcycles and motor tricycles and for quadricycles as defined in Article 1(3)(b).
² Only for mopeds and for light quadricycles as defined in Article 1(3)(a).
The maximum number of vehicles put into service in each Member State under the procedure laid down in Article 16(2) shall be restricted in one of the following ways to be chosen by the Member State:

either

(a) the maximum number of vehicles of one or more types may not exceed 10% of the vehicles of all types concerned put into service in that Member State during the previous year. Should 10% be less than 100 vehicles, then the Member State may allow the putting into service of a maximum of 100 vehicles, or

(b) the number of vehicles of any one type shall be restricted to those for which a valid certificate of conformity was issued on or after the date of manufacture and which remained valid for at least three months after its date of issue but subsequently lost its validity because of coming into force of a separate directive.

A special entry shall be made on the certificate of conformity of the vehicles put into service under this procedure.

STATEMENT OF THE COUNCIL’S REASONS

I. INTRODUCTION

1. On 25 June 1999, the Commission submitted a proposal (¹) based on Article 95 of the Treaty.

2. The Economic and Social Committee delivered its opinion (²) on 21 October 1999.

3. The European Parliament adopted its opinion (³) at first reading on 27 October 1999, approving the proposal without amendments.

II. OBJECTIVE

5. The proposal aims to ensure the effective operation of whole-vehicle type-approval for two and three-wheel motor vehicles across the internal market. The proposed Directive clarifies certain requirements, including the length of validity of national type-approvals, and introduces harmonised provisions in the field of administration and documentation. It also caters for new areas, such as end-of-series vehicles and new technologies.

III. ANALYSIS OF THE COMMON POSITION

6. The proposal has been examined by the Council under several Presidencies and it has undergone some modifications which, however, do not change its overall orientation. The main changes are as follows:

8. The Council has clarified the definition of electrically assisted bicycles (Article 1(1) (2)(h)). The Council has modified the categories defining different classes of two and three-wheel vehicle. (Article 1(2) and (3)). The new text accommodates two-wheel mopeds fitted with an electric motor and three-wheel mopeds equipped with an electric motor or a diesel engine. A system of codes has also been introduced for administrative purposes (see also Annex II, Information Document, footnote (c)).

9. The definitions of type of vehicle, variant and version have been clarified (Article 2(1) (2) and (3)). In order to align the text with the framework motor vehicle legislation laid down in Directive 70/156/EEC, the concept of a system has been added (Article 2(4)).

10. A new provision has been added allowing Member States to refuse to grant type-approval on safety grounds (Article 4(6)).

11. The administrative provisions concerning type-approval numbers have been adjusted (Article 8 and Annex V).

12. Provisions were added allowing Member States to use national code systems to facilitate registration and taxation pending further harmonisation in these fields (Article 22).

13. A new column was added to the table listing requirements for the purpose of vehicle type-approval, in order to point users to the separate directives that regulate certain aspects of vehicle design (Annex I).

14. To ensure that complete information is provided to the type-approval authorities, a list of separate directive approval numbers was added to the Information Document (Annex II, Part 2).

15. Letter codes were introduced in the certificate of conformity to facilitate the use of computerised documentation systems (Annex IV, footnotes).

16. A large number of small technical adjustments and clarifications were also introduced to the text.

IV. CONCLUSION

17. The Council considers that by approving the bulk of the Commission proposal while also introducing a large number of detailed amendments it has arrived at a practicable solution which addresses the needs arising from new technologies and ensures a high level of road safety.
