II

(Acts adopted under the EC Treaty/Euratom Treaty whose publication is not obligatory)

ACTS ADOPTED BY BODIES CREATED BY INTERNATIONAL AGREEMENTS

Only the original UN/ECE texts have legal effect under international public law. The status and date of entry into force of this Regulation should be checked in the latest version of the UN/ECE status document TRANS/WP.29/343/, available at: http://www.unece.org/trans/main/wp29/wp29wps/wp29gen/wp29fdocstts.html.

Regulation No 89 of the Economic Commission for Europe of the United Nations (UN/ECE) — Uniform prescriptions for approval of:

I. Vehicles with regard to limitation of their maximum speed or their adjustable speed limitation function;

II. Vehicles with regard to the installation of a speed limitation device (SLD) or adjustable speed limitation device (ASLD) of an approved type;

III. Speed limitation device (SLD) and adjustable speed limitation device (ASLD)

Addendum 88: Regulation No 89

Incorporates all valid text up to:

Supplement 1 to the original version of the Regulation — Date of entry into force: 12 August 2002

1. SCOPE

1.1. This Regulation applies to:

1.1.1. Part I: Vehicles of categories (1) M₃, N₂ and N₃ (2) equipped with an SLD and to vehicles of categories M and N equipped with an adjustable speed limitation device ASLD which have not been separately approved according to Part III of this Regulation, or so designed and/or equipped that its component parts can be regarded as totally or partially fulfilling the function of an SLD or ASLD, as appropriate.

1.1.2. Part II: The installation on vehicles of categories M₃, N₂ and N₃ of SLDs and installation on vehicles of categories M and N of ASLD which have been type approved to Part III of this Regulation.

(1) As defined in the Consolidated Resolution on the Construction of Vehicles (R.E.3) (TRANS/WP29/78/Rev. 1/Amdend.2).
(2) It is recommended to apply this Regulation with respect to SLDs to vehicles over 10 tonnes for which the limitation speed is less than the general speed limitation.
1.1.3. Part III: SLDs which are intended to be fitted to vehicles of categories M₃, N₂ and N₃ and ASLD which are intended to be fitted to vehicles of categories M and N.

1.2. Purpose

The purpose of this Regulation is to limit the road speed of vehicles by means of a vehicle system which has the primary function of controlling the fuel feed to the engine or via the engine management.

1.2.1. Vehicles of categories M₃, N₂ and N₃ shall be limited to a maximum speed achieved by a speed limitation device (SLD) or function (SLF).

1.2.2. Vehicles of categories M₁, N₁ and M₂ shall be limited to a speed voluntarily set by the driver by means of an adjustable speed limitation device (ASLD) or function (ASLF), when it is activated.

1.2.3. Vehicles of categories M₃, N₂ and N₃ may in addition be equipped with an ASLD or an ASLF.

2. DEFINITIONS

2.1. For the purpose of this Regulation:

2.1.1. 'Limitation speed V' means the maximum speed of the vehicle such that its design or equipment does not permit a response after a positive action on the accelerator control;

2.1.2. 'Set speed V_set' means the intended mean vehicle speed when operating in a stabilised condition;

2.1.3. 'Stabilised speed V_stab' means the mean vehicle speed when operating in the condition specified in paragraph 1.1.4.2.3 of Annex 5 to this Regulation;

2.1.4. 'Maximum speed V_max' is the maximum speed reached by the vehicle in the first half period of the response curve as defined in the figure of Annex 5 (para. 1.1.4.2.4);

2.1.5. 'Adjustable limit speed V_adj' means the speed voluntarily set by the driver;

2.1.6. 'Adjustable speed limitation function ASLF' means a function which allows the driver to set a vehicle speed V_adj, and when activated limits the vehicle automatically to that speed;

2.1.7. 'Speed limitation function', means a function to control the fuel feed of the vehicle or engine management in order to limit the vehicle speed to a fixed maximum value.

2.2. For the purpose of Part I of this Regulation:

2.2.1. 'Approval of a vehicle' means the approval of a vehicle type with regard to speed limitation.

2.3. For the purpose of Part II of this Regulation:

2.3.1. 'Approval of a vehicle' means the approval of a vehicle type with regard to the installation of an SLD of a type approved in accordance with Part III of this Regulation.
2.4. For the purpose of Part I and Part II of this Regulation:

2.4.1. 'Vehicle type' means vehicles which do not differ in such essential respects as:

2.4.1.1. The make and type of the SLD, if any,

2.4.1.2. The range of speeds at which the limitation may be set within the range established for the tested vehicle;

2.4.1.3. The ratio of maximum engine power/unladen mass, less than or equal to that of the tested vehicle; and

2.4.1.4. The highest ratio of engine speed/vehicle speed in top gear, less than or equal to that of the tested vehicle.

2.5. 'Unladen mass' means the mass of the vehicle in running order without crew, passengers or load, but with the fuel tank full and the usual set of tools and spare wheel on board, where applicable.

2.6. For the purpose of Part III of this Regulation:

2.6.1. 'Speed limitation device (SLD)' means a device whose primary function is to control the fuel feed to the engine in order to limit the vehicle speed to the specified value;

2.6.2. 'Approval of an SLD' means the approval of a type of SLD with respect to the requirements laid down in paragraph 21 below;

2.6.3. 'Type of an SLD' means SLDs which do not differ with respect to the essential characteristics such as:

The make and type of the device,
The range of speed values at which the SLD may be set,
The method used to control the fuel feed of the engine.

PART I

APPROVAL OF VEHICLES WITH REGARD TO LIMITATION OF THEIR MAXIMUM SPEED

3. APPLICATION FOR APPROVAL

3.1. The application for approval of a vehicle type with regard to speed limitation shall be submitted by the vehicle manufacturer or by his duly accredited representative.

3.2. It shall be accompanied by the under-mentioned documents in triplicate and by the following particulars:

3.2.1. A detailed description of the vehicle type and of vehicle parts related to the speed limitation, comprising the particulars and documents referred to in Annex 1 to this Regulation;

3.2.2. A vehicle representative of the type to be approved shall be submitted to the technical service responsible for conducting the approval tests;

3.2.3. A vehicle not comprising all the components proper to the type may be accepted for test provided that it can be shown by the applicant to the satisfaction of the competent authority that the absence of the components omitted has no effect on the results of the verifications, so far as the requirements of this Regulation are concerned.
3.3. The competent authority shall verify the existence of satisfactory arrangements for ensuring effective checks on conformity of production before type approval is granted.

4. APPROVAL

4.1. If the vehicle submitted for approval pursuant to this Regulation meets the requirements of paragraph 5 below, approval of that vehicle type shall be granted.

4.2. An approval number shall be assigned to each type approved. Its first two digits (00 for the Regulation in its present form) shall indicate the series of amendments incorporating the most recent major technical amendments made to the Regulation at the time of issue of the approval. The same Contracting Party may not assign the same number to another vehicle type.

4.3. Notice of approval or of extension or refusal or withdrawal of approval or production definitely discontinued of a vehicle type pursuant to this Regulation shall be communicated to the Parties to the Agreement which apply this Regulation by means of a form conforming to the model in Annex 1 to this Regulation.

4.4. There shall be affixed, conspicuously and in a readily accessible place specified on the approval form, to every vehicle conforming to a vehicle type approved under this Regulation an international approval mark consisting of:

4.4.1. A circle surrounding the letter ‘E’ followed by the distinguishing number of the country which has granted approval (1);

4.4.2. The number of this Regulation, followed by the letter ‘R’, a dash and the approval number to the right of the circle prescribed in paragraph 4.4.1;

4.4.3. The following additional symbol: a rectangle surrounding a figure (or number of figures) expressing the set speed (or range of set speeds) in km/h (and mile/h if requested by the applicant).

4.5. If the vehicle conforms to a vehicle type approved, under one or more other Regulations annexed to the Agreement, in the country which has granted approval under this Regulation, the symbol prescribed in paragraph 4.4.1 need not be repeated; in such a case the Regulation and approval numbers and the additional symbols of all the Regulations under which approval has been granted in the country which has granted approval under this Regulation shall be placed in vertical columns to the right of the symbol prescribed in paragraph 4.4.1.

4.6. The approval mark shall be clearly legible and indelible.

4.7. The approval mark shall be placed close to or on the vehicle data plate affixed by the manufacturer.

4.8. Models B and C of Annex 4 to this Regulation give examples of arrangements of approval marks.

(1) 1 for Germany, 2 for France, 3 for Italy, 4 for the Netherlands, 5 for Sweden, 6 for Belgium, 7 for Hungary, 8 for the Czech Republic, 9 for Spain, 10 for Yugoslavia, 11 for the United Kingdom, 12 for Austria, 13 for Luxembourg, 14 for Switzerland, 15 (vacant), 16 for Norway, 17 for Finland, 18 for Denmark, 19 for Romania, 20 for Poland, 21 for Portugal, 22 for the Russian Federation, 23 for Greece, 24 for Ireland, 25 for Croatia, 26 for Slovenia, 27 for Slovakia, 28 for Belarus, 29 for Estonia, 30 (vacant), 31 for Bosnia and Herzegovina, 32 for Latvia, 33 (vacant), 34 for Bulgaria, 35 (vacant), 36 for Lithuania, 37 for Turkey, 38 (vacant), 39 for Azerbaijan, 40 for The Former Yugoslav Republic of Macedonia, 41 (vacant), 42 for the European Community (Approvals are granted by its Member States using their respective ECE symbol), 43 for Japan, 44 (vacant), 45 for Australia, 46 for Ukraine, 47 for South Africa and 48 for New Zealand. Subsequent numbers shall be assigned to other countries in the chronological order in which they ratify or accede to the Agreement Concerning the Adoption of Uniform Technical Prescriptions for Wheeled Vehicles, Equipment and Parts which can be Fitted and/or be Used on Wheeled Vehicles and the Conditions for Reciprocal Recognition of Approvals Granted on the Basis of these Prescriptions, and the numbers thus assigned shall be communicated by the Secretary-General of the United Nations to the Contracting Parties to the Agreement.
4.9. In addition to the marking requirements of paragraph 4.4 above, Contracting Parties to this Regulation may require the vehicle to be equipped with a plate which is in a conspicuous and readily accessible position within the driving compartment and which shows clearly and indelibly:

4.9.1. The words ‘SPEED LIMITER FITTED’ (or other words to similar effect),

4.9.2. The name or trade mark of the SLD calibrator (if applicable),

4.9.3. A circle surrounding the letter ‘E’ followed by the distinguishing number of the country which has granted approval and the number of this Regulation, followed by the letter ‘R’, and

4.9.4. The set speed in km/h (and mile/h if requested) at which the vehicle is calibrated.

5. REQUIREMENTS

5.1. Requirements for vehicles of categories M₃, N₂ and N₃ equipped with SLF

5.1.1. The speed limitation must be such that the vehicle in normal use, despite the vibrations to which it may be subjected, complies with the provisions of Part I of this Regulation.

5.1.2. In particular, the vehicle’s SLD must be so designed, constructed and assembled as to resist corrosion and ageing phenomena to which it may be exposed and to resist tempering in accordance with paragraph 5.1.6 below.

5.1.2.1. The limitation threshold must not, in any case, be capable of being increased or removed temporarily or permanently on vehicles in use. The inviolability shall be demonstrated to the technical service with documentation analysing the failure mode in which the system will be globally examined. The analysis shall show, taking into account the different states taken by the system, the consequences of a modification of the input or output states on the functioning, the possibilities to obtain these modifications by failures or by voluntary violation and the possibility of their occurrence. The analysis level will be always to the first failure.

5.1.2.2. The speed limitation function and the connections necessary for its operation, except those essential for the running of the vehicle, shall be capable of being protected from any unauthorised adjustments or the interruption of its energy supply by the attachment of sealing devices and/or the need to use special tools.

5.1.3. The speed limitation function shall not actuate the vehicle’s service braking system. A permanent brake (e.g. retarder) may be incorporated only if it operates after the speed limitation function has restricted the fuel feed to the minimum fuel position.

5.1.4. The speed limitation function must be such that it does not affect the vehicle’s road speed if a positive action on the accelerator is applied when the vehicle is running at its set speed.

5.1.5. The speed limitation function may allow normal accelerator control for the purposes of gear changing.

5.1.6. No malfunction or unauthorised interference shall result in an increase in engine power above that demanded by the position of the driver’s accelerator.

5.1.7. The speed limitation function shall be obtained regardless of the accelerator control used if there is more than one such control which may be reached from the driver’s seating position.
5.1.8. The speed limitation function shall operate satisfactorily in its electromagnetic environment without unacceptable electromagnetic disturbance for anything in this environment.

5.1.9. The applicant for approval shall provide documentation describing checking and calibration procedures. It shall be possible to check the functioning of the speed limitation function whilst the vehicle is stationary (e.g. for conformity of production or periodic inspection).

5.1.10. All components necessary for the full function of the speed limitation function shall be energised whenever the vehicle is being driven.

5.2. **Requirements for vehicles equipped with ASLF**

5.2.1. The ASLF must be such that the vehicle in normal use, despite the vibrations to which it may be subjected, complies with the provisions of Part I of this Regulation.

5.2.1.1. In particular, the device and all components supporting the ASLF must be so designed, constructed and assembled as to resist corrosion and ageing phenomena to which it may be exposed.

5.2.2. The ASLF shall operate satisfactorily in its electromagnetic environment and conform to the technical prescriptions of Regulation No 10 to the latest level of amendments in force at the time of type approval.

5.2.3. No malfunction or unauthorised interference with the system shall result in an increase in engine power above that demanded by the position of the driver’s accelerator.

5.2.4. The \( V_{adj} \) value shall be permanently indicated to the driver and visible from the driver seat. This does not preclude temporary interruption of the indication for safety reasons or driver’s demand.

5.2.5. The ASLF must satisfy the following requirements:

5.2.5.1. The ASLF shall not actuate the vehicle’s service braking system except for vehicles of categories M1 and N1, where the vehicle’s service braking system may be actuated.

5.2.5.2. The ASLF must be effective whichever the engine type or transmission is used.

5.2.5.3. The vehicle speed shall be limited to \( V_{adj} \).

5.2.5.4. It shall still be possible to exceed \( V_{adj} \) when tested in accordance with paragraph 5.3.

5.2.5.4.1. To exceed \( V_{adj} \) a positive action will be required (\(^\ast\)).

5.2.5.4.2. Whenever the vehicle speed is exceeding \( V_{adj} \), the driver must be informed by means of a suitable or warning signal other than the speedometer.

5.2.5.4.3. Compliance with paragraph 5.2.5.4.2 shall be demonstrated by conducting the tests according to paragraph 5.3.

5.2.6. Setting of \( V_{adj} \):

5.2.6.1. It shall be possible to set \( V_{adj} \) value by steps not greater than 10 km/h between 30 km/h and the maximum design speed of the vehicle.

\(^\ast\) e.g. kickdown.
5.2.6.2. In the case of vehicles manufactured for sale in any country where imperial units are used, it shall be possible to set $V_{adj}$ value by steps not greater than 5 mph between 20 mph and the maximum design speed of the vehicle.

5.2.6.3. This shall be achieved by a control device operated directly by the driver.

5.2.7. Activation/de-activation:

5.2.7.1. The ASLF must be capable of being activated/de-activated at any time.

5.2.7.2. The ASLF must be de-activated each time the engine is stopped by a deliberate action of the driver.

5.2.7.3. When the ASLF is activated the initial setting of $V_{adj}$ shall not be less than the current vehicle speed.

5.3. Tests

5.3.1. The speed limitation tests to which the vehicle presented for approval is submitted as well as the limitation performances required, are described in Annex 5 of this Regulation. At the request of the manufacturer and with the agreement of the type approval authority, vehicles whose theoretical limitation speed $V$ does not exceed the set speed $V_{set}$ defined for those vehicles may be exempt from the testing of Annex 5 providing the requirements of this Regulation are met.

5.3.2. The adjustable speed limitation tests to which the vehicle presented for approval are submitted are described in Annex 6 of this Regulation.

5.3.2.1. Three different speeds will be chosen for the tests at the discretion of the technical service

6. MODIFICATIONS OF VEHICLE TYPE AND EXTENSION OF APPROVAL

6.1. Every modification of the vehicle type shall be notified to the administrative department which approved the vehicle type. The department may then either:

6.1.1. Consider that the modifications made are unlikely to have an appreciable adverse effect and that in any case the vehicle still complies with the requirements, or

6.1.2. Require a further test report from the technical service responsible for conducting the tests.

6.2. Confirmation or refusal of approval, specifying the alteration, shall be communicated by the procedure specified in paragraph 4.3 above to the Parties to the 1958 Agreement which apply this Regulation.

6.3. The competent authority issuing an extension of approval shall assign a series number to each communication form drawn up for such an extension and inform thereof the other Parties to the 1958 Agreement applying this Regulation by means of a communication form conforming to the model in Annex 1 to this Regulation.

7. CONFORMITY OF PRODUCTION

7.1. Every vehicle approved under this Regulation shall be so manufactured as to conform to the type approved by meeting the requirements set out in paragraph 5 above.

7.2. In order to verify that the requirements of paragraph 7.1 are met, suitable checks of the production shall be carried out.
7.3. The holder of the approval shall, in particular:

7.3.1. Ensure existence of procedures for effective quality control of the vehicle;

7.3.2. Have access to the testing equipment necessary for checking conformity to each approved type;

7.3.3. Ensure that test result data are recorded and that the annexed documents remain available for a period to be determined in agreement with the administrative department;

7.3.4. Analyse the results of each type of test, in order to verify and ensure the consistency of characteristics of the vehicle, making allowance for permissible variations in industrial production;

7.3.5. Ensure that for each type of vehicle sufficient checks and tests are carried out in accordance with the procedures approved with the competent authority;

7.3.6. Ensure that any set of samples or test components giving evidence of non-conformity in the type of test in question shall give rise to a further sampling and test. All necessary steps shall be taken to restore conformity of the corresponding production.

7.4. The competent authority which has granted type approval may at anytime verify the conformity control methods applied in each production unit.

7.4.1. At every inspection, the test records and production records shall be presented to the visiting inspector.

7.4.2. The inspector may select samples at random to be tested in the manufacturer's laboratory. The minimum number of samples may be determined according to the results of the manufacturer's own checks.

7.4.3. Where the quality level appears unsatisfactory or it seems necessary to verify the validity of the tests carried out in application of paragraph 7.4.2, the inspector shall select samples to be sent to the technical service which conducted the type approval tests.

7.4.4. The competent authority may carry out any test prescribed in this Regulation. The normal frequency of inspections authorised by the competent authority shall be one every two years. In cases where unsatisfactory results are found during one of these inspections, the competent authority shall ensure that all necessary steps are taken to restore conformity of production as rapidly as possible.

8. PENALTIES FOR NON-CONFORMITY OF PRODUCTION

8.1. The approval granted in respect of a vehicle type pursuant to this Regulation may be withdrawn if the requirements laid down in paragraph 5 above are not complied with.

8.2. If a Contracting Party to the 1958 Agreement applying this Regulation withdraws an approval it has previously granted, it shall forthwith so notify the other Contracting Parties applying this Regulation, by means of a communication form conforming to the model in Annex 1 to this Regulation.

9. PRODUCTION DEFINITELY DISCONTINUED

9.1. If the holder of the approval completely ceases to manufacture a type of vehicle approved in accordance with this Regulation, he shall so inform the authority which granted the approval. Upon receiving the relevant communication, that authority shall inform thereof the other Parties to the 1958 Agreement applying this Regulation by means of a communication form conforming to the model in Annex 1 to this Regulation.
10. NAMES AND ADDRESSES OF TECHNICAL SERVICES RESPONSIBLE FOR CONDUCTING APPROVAL TESTS AND OF ADMINISTRATIVE DEPARTMENTS

10.1. The Contracting Parties to the 1958 Agreement applying this Regulation shall communicate to the United Nations secretariat the names and addresses of the technical services responsible for conducting approval tests and of the administrative departments which grant approval and to which forms certifying approval or extension, or refusal or withdrawal of approval or production definitely discontinued, issued in other countries, are to be sent.

PART II

APPROVAL OF VEHICLES WITH REGARD TO THE INSTALLATION OF A SPEED LIMITATION DEVICE (SLD) OF AN APPROVED TYPE

11. APPLICATION FOR APPROVAL

11.1. The application for approval of a vehicle type with regard to the installation of an SLD of an approved type shall be submitted by the vehicle manufacturer or by his duly accredited representative.

11.2. It shall be accompanied by the under-mentioned documents in triplicate and by the following particulars:

11.2.1. A detailed description of the vehicle type and of vehicle parts related to the speed limitation, comprising the particulars and documentation referred to in Annex 2 to this Regulation.

11.2.2. At the request of the competent authority the type approval communication form (i.e. Annex 3 of this Regulation) of each type of SLD shall also be supplied.

11.2.3. A vehicle representative of the type to be approved and fitted with a type approved SLD shall be submitted to the technical service,

11.2.3.1. A vehicle not comprising all the components proper to the type may be accepted provided that it can be shown by the applicant to the satisfaction of the competent authority that the absence of the components omitted has no effect on the results of the verifications, so far as the requirements of this Regulation are concerned.

11.3. The competent authority shall verify the existence of satisfactory arrangements for ensuring effective checks on conformity of production before type approval is granted.

12. APPROVAL

12.1. If the vehicle submitted for approval pursuant to this Regulation is provided with an approved SLD and meets the requirements of paragraph 13 below, approval of that vehicle type shall be granted.

12.2. An approval number shall be assigned to each type approved. Its first two digits (00 for the Regulation in its present form) shall indicate the series of amendments incorporating the most recent major technical amendments made to the Regulation at the time of issue of the approval. The same Contracting Party may not assign the same number to another vehicle type.

12.3. Notice of approval or of extension or refusal or withdrawal of approval or production definitely discontinued of a vehicle type pursuant to this Regulation shall be communicated to the Parties to the Agreement which apply this Regulation by means of a form conforming to the model in Annex 2 to this Regulation.
12.4. There shall be affixed, conspicuously and in a readily accessible place specified on the approval form, to every vehicle conforming to a vehicle type approved under this Regulation an international approval mark consisting of:

12.4.1. A circle surrounding the letter ‘E’ followed by the distinguishing number of the country which has granted approval (1);

12.4.2. The number of this Regulation, followed by the letter ‘R’, a dash and the approval number to the right of the circle prescribed in paragraph 12.4.1.

12.4.3. The following additional symbol: a rectangle surrounding a number of figures corresponding to the range of vehicle speeds for which the SLD may be set, expressed in km/h (and mile/h if requested by the applicant).

12.5. If the vehicle conforms to a vehicle type approved, under one or more other Regulations annexed to the Agreement, in the country which has granted approval under this Regulation, the symbol prescribed in paragraph 12.4.1 need not be repeated; in such a case the Regulation and approval numbers and the additional symbols of all the Regulations under which approval has been granted in the country which has granted approval under this Regulation shall be placed in vertical columns to the right of the symbol prescribed in paragraph 12.4.1.

12.6. The approval mark shall be clearly legible and indelible.

12.7. The approval mark shall be placed close to or on the vehicle data plate affixed by the manufacturer.

12.8. Models B and C of Annex 4 to this Regulation give examples of arrangements of approval marks.

12.9. In addition to the marking requirements of paragraph 12.4 above, Contracting Parties to this Regulation may require the vehicle to be equipped with a plate which is in a conspicuous and readily accessible position within the driving compartment and which shows clearly and indelibly:

12.9.1. The words ‘SPEED LIMITER FITTED’ (or other words to similar effect),

12.9.2. The name or trade mark of the SLD calibrator (if applicable),

12.9.3. A circle surrounding the letter ‘E’ followed by the distinguishing number of the country which has granted approval and the number of this regulation, followed by the letter ‘R’, and

12.9.4. The set speed in km/h (and mile/h if requested) at which the vehicle is calibrated.

(1) 1 for Germany, 2 for France, 3 for Italy, 4 for the Netherlands, 5 for Sweden, 6 for Belgium, 7 for Hungary, 8 for the Czech Republic, 9 for Spain, 10 for Yugoslavia, 11 for the United Kingdom, 12 for Austria, 13 for Luxembourg, 14 for Switzerland, 15 (vacant), 16 for Norway, 17 for Finland, 18 for Denmark, 19 for Romania, 20 for Poland, 21 for Portugal, 22 for the Russian Federation, 23 for Greece, 24 for Ireland, 25 for Croatia, 26 for Slovenia, 27 for Slovakia, 28 for Belarus, 29 for Estonia, 30 (vacant), 31 for Bosnia and Herzegovina, 32 for Latvia, 33 (vacant), 34 for Bulgaria, 35 (vacant), 36 for Lithuania, 37 for Turkey, 38 (vacant), 39 for Azerbaijan, 40 for The Former Yugoslav Republic of Macedonia, 41 (vacant), 42 for the European Community (Approvals are granted by its Member States using their respective ECE symbol), 43 for Japan, 44 (vacant), 45 for Australia, 46 for Ukraine, 47 for South Africa and 48 for New Zealand. Subsequent numbers shall be assigned to other countries in the chronological order in which they ratify or accede to the Agreement Concerning the Adoption of Uniform Technical Prescriptions for Wheeled Vehicles, Equipment and Parts which can be Fitted and/or be Used on Wheeled Vehicles and the Conditions for Reciprocal Recognition of Approvals Granted on the Basis of these Prescriptions, and the numbers thus assigned shall be communicated by the Secretary-General of the United Nations to the Contracting Parties to the Agreement.
13. REQUIREMENTS

13.1. Requirements concerning the installation of an approved SLD

13.1.1. The SLD shall be so installed as to enable the vehicle in normal use, despite the vibrations to which it may be subjected, to comply with the provisions of Part II of this Regulation.

13.1.2. The information document shall indicate how inviolability of the SLD is assured. The analysis level will be always to the first failure.

13.1.3. The speed limitation function shall be obtained regardless of the accelerator control used if there is more than one such control which may be reached from the driver's seating position.

13.1.4. The applicant for approval shall provide documentation describing checking and calibration procedures. It shall be possible to check the functioning of the speed limitation function whilst the vehicle is stationary (e.g. for conformity of production or periodic inspection).

13.1.5. All components necessary for the full function of the SLD shall be energised whenever the vehicle is being driven.

13.1.6. The speed limitation function shall not actuate the vehicle's service braking system. A permanent brake (e.g. retarder) may be incorporated only if it operates after the speed limitation function has restricted the fuel feed to the minimum fuel position.

13.2. Requirements concerning the installation of an approved ASLD

13.2.1. The vehicle on which the approved ASLD has been installed shall meet all requirements of paragraphs 5.2.2, 5.2.4, 5.2.5.4, 5.2.6 and 5.2.7.

14. MODIFICATIONS OF VEHICLE TYPE AND EXTENSION OF APPROVAL

14.1. Every modification of the vehicle type shall be notified to the administrative department which approved the vehicle type. The department may then either:

14.1.1. Consider that the modifications made are unlikely to have an appreciable adverse effect and that in any case the vehicle still complies with the requirements, or

14.1.2. Require a further report from the technical service.

14.2. Confirmation or refusal of approval, specifying the alteration, shall be communicated by the procedure specified in paragraph 12.3 above to the Parties to the 1958 Agreement which apply this Regulation.

14.3. The competent authority issuing the extension of approval shall assign a series number to each communication form drawn up for such an extension and inform thereof the other Parties to the 1958 Agreement applying this Regulation by means of a communication form conforming to the model in Annex 2 to this Regulation.

15. CONFORMITY OF PRODUCTION

15.1. Every vehicle approved pursuant to this Regulation shall be so manufactured as to conform to the type approved by meeting the requirements set out in paragraph 13.

15.2. In order to verify that the requirements of paragraph 15.1 are met, appropriate checks on production shall be carried out.
15.3. The holder of the approval shall in particular:

15.3.1. Ensure existence of procedures for effective quality control of the vehicles as regards all aspects relevant to compliance with the requirements set out in paragraph 13 above;

15.3.2. Ensure that for every approved vehicle sufficient checks are carried out regarding the installation of a type approved SLD, in such a way that all vehicles in production comply with the specifications of the vehicles submitted for type approval;

15.3.3. Ensure that, if the checks carried out pursuant to paragraph 15.3.2 above give evidence of non-conformity of one or more vehicles with the requirements set out in paragraph 13 above, all necessary steps are taken to restore conformity of the corresponding production.

15.4. The competent authority which granted type approval may at any time verify the conformity control methods applied for each production unit. The authority may also carry out random checks on serially manufactured vehicles in respect to the requirements set out in paragraph 13 above.

15.5. Where unsatisfactory results are found during verifications and checks pursuant to paragraph 15.4 above, the competent authority shall ensure that all necessary steps are taken to restore conformity of production as rapidly as possible.

15.6. The normal frequency of inspections authorised by the competent authority shall be one every two years. In cases where unsatisfactory results are found during one of these inspections, the competent authority shall ensure that all necessary steps are taken to restore conformity of production as rapidly as possible.

16. PENALTIES FOR NON-CONFORMITY OF PRODUCTION

16.1. The approval granted in respect of a vehicle type pursuant to this Regulation may be withdrawn if the requirements laid down in paragraph 13 above are not complied with.

16.2. If a Contracting Party to the 1958 Agreement applying this Regulation withdraws an approval it has previously granted, it shall forthwith so notify the other Contracting Parties applying this Regulation, by means of a communication form conforming to the model in Annex 2 to this Regulation.

17. PRODUCTION DEFINITELY DISCONTINUED

17.1. If the holder of the approval completely ceases to manufacture a type of vehicle approved in accordance with this Regulation, he shall so inform the authority which granted the approval. Upon receiving the relevant communication, that authority shall inform thereof the other Parties to the 1958 Agreement applying this Regulation by means of a communication form conforming to the model in Annex 2 to this Regulation.

18. NAMES AND ADDRESSES OF TECHNICAL SERVICES RESPONSIBLE FOR CONDUCTING APPROVAL TESTS AND OF ADMINISTRATIVE DEPARTMENTS

18.1. The Contracting Parties to the 1958 Agreement applying this Regulation shall communicate to the United Nations secretariat the names and addresses of the technical services responsible for conducting approval tests and of the administrative departments which grant approval and to which forms certifying approval or extension or refusal or withdrawal of approval or production definitely discontinued issued in other countries, are to be sent.
PART III

APPROVAL OF SPEED LIMITATION DEVICES (SLD)

19. APPLICATION FOR APPROVAL OF AN SLD

19.1. The application for approval of an SLD must be submitted by the manufacturer of the SLD or by his duly accredited representative.

19.2. For each type of SLD the application must be accompanied by:

19.2.1. Documentation in triplicate giving a description of the technical characteristics of the SLD and the method of its installation on each make and type of vehicle for which the SLD is intended to be installed;

19.2.2. Five samples of the type of SLD: the samples must be clearly and indelibly marked with the applicant’s trade name or mark and the type designation;

19.2.3. A vehicle or an engine (in the case of testing on an engine bench) fitted with the SLD to be type approved, chosen by the applicant in agreement with the technical service responsible for conducting approval tests.

19.3. The competent authority shall verify the existence of satisfactory arrangements for ensuring effective control of the conformity of production before type approval is granted.

20. APPROVAL

20.1. If the SLD submitted for approval pursuant to this Regulation meets the requirements of paragraph 21 below, approval of that type of SLD shall be granted.

20.2. An approval number shall be assigned to each type approved. Its first two digits (00 for the Regulation in its present form) shall indicate the series of amendments incorporating the most recent major technical amendments made to the Regulation at the time of issue of the approval. The same Contracting Party may not assign the same number to another type of SLD.

20.3. Notice of approval, or of extension or refusal or withdrawal of approval or production definitely discontinued, of a type of SLD pursuant to this Regulation shall be communicated to the Parties to the Agreement which apply this Regulation by means of a form conforming to the model in Annex 3 to this Regulation.

20.4. There shall be affixed, conspicuously and in a readily accessible place specified on the approval form, to every SLD conforming to a type of SLD approved under this Regulation an international approval mark consisting of:
20.4.1. A circle surrounding the letter ‘E’ followed by the distinguishing number of the country which has granted approval (1);

20.4.2. The number of this Regulation, followed by the letter ‘R’, a dash and the approval number to the right of the circle prescribed in paragraph 20.4.1.

20.5. The approval mark shall be clearly legible and indelible.

20.6. Model A of Annex 4 to this Regulation gives examples of arrangements of approval marks.

21. REQUIREMENTS

21.1. General

21.1.1. The SLD shall be so designed, constructed and assembled as to enable the vehicle in normal use, fitted with the SLD, to comply with the provisions of Part III of this Regulation.

21.1.2. In particular, the SLD must be so designed, constructed and assembled as to resist corrosion and ageing phenomena to which it may be exposed and to resist tampering in accordance with paragraph 21.1.6.

21.1.2.1. The set speed $V_{\text{set}}$ must not, in any case, be capable of being increased or removed temporarily or permanently on vehicles in use. The inviolability shall be demonstrated to the technical service with documentation analysing the failure mode in which the system will be globally examined. The analysis shall show, taking into account the different states taken by the system, the consequences of a modification of the input or output states on the functioning, the possibilities to obtain these modifications by failures or by voluntary violation and the possibility of their occurrence. The analysis level will be always to the first failure.

21.1.2.2. The SLD and the connections necessary for its operation, except those essential for the running of the vehicle, shall be capable of being protected from any unauthorised adjustments or the interruption of its energy supply by the attachment of seals and/or the need to use special tools.

21.1.3. The SLD shall not actuate the vehicle’s service braking system. A permanent brake (e.g. retarder) may be actuated only if it operates after the speed limitation device has restricted the fuel feed to the minimum fuel position.

21.1.4. The SLD must be such that it does not affect the vehicle’s road speed if a positive action on the accelerator is applied when the vehicle is running at its set speed.

21.1.5. The SLD may allow normal accelerator control for the purposes of gear changing.

(1) 1 for Germany, 2 for France, 3 for Italy, 4 for the Netherlands, 5 for Sweden, 6 for Belgium, 7 for Hungary, 8 for the Czech Republic, 9 for Spain, 10 for Yugoslavia, 11 for the United Kingdom, 12 for Austria, 13 for Luxembourg, 14 for Switzerland, 15 (vacant), 16 for Norway, 17 for Finland, 18 for Denmark, 19 for Romania, 20 for Poland, 21 for Portugal, 22 for the Russian Federation, 23 for Greece, 24 for Ireland, 25 for Croatia, 26 for Slovenia, 27 for Slovakia, 28 for Belarus, 29 for Estonia, 30 (vacant), 31 for Bosnia and Herzegovina, 32 for Latvia, 33 (vacant), 34 for Bulgaria, 35 (vacant), 36 for Lithuania, 37 for Turkey, 38 (vacant), 39 for Azerbaijan, 40 for The Former Yugoslav Republic of Macedonia, 41 (vacant), 42 for the European Community (Approvals are granted by its Member States using their respective ECE symbol), 43 for Japan, 44 (vacant), 45 for Australia, 46 for Ukraine, 47 for South Africa and 48 for New Zealand. Subsequent numbers shall be assigned to other countries in the chronological order in which they ratify or accede to the Agreement Concerning the Adoption of Uniform Technical Prescriptions for Wheeled Vehicles, Equipment and Parts which can be Fitted and/or be Used on Wheeled Vehicles and the Conditions for Reciprocal Recognition of Approvals Granted on the Basis of these Prescriptions, and the numbers thus assigned shall be communicated by the Secretary-General of the United Nations to the Contracting Parties to the Agreement.
21.1.6. No malfunction or unauthorised interference shall result in an increase in engine power above that demanded by the position of the driver’s accelerator.

21.1.7. The SLD shall operate satisfactorily in its electromagnetic environment without unacceptable electromagnetic disturbance for anything in this environment.

21.2. Requirements for ASLDs

21.2.1. The adjustable speed limitation device ASLD must be such that the vehicle in normal use, despite the vibrations to which it may be subjected, complies with the provisions of Part III of this Regulation.

21.2.1.1. In particular, the ASLF must be so designed, constructed and assembled as to resist corrosion and ageing phenomena to which it may be exposed.

21.2.2. The speed limitation function shall operate satisfactorily in its electromagnetic environment, in accordance with prescriptions of Regulation No 10 to the latest level of amendments in force at the time of type approval.

21.2.3. No malfunction or unauthorised interference shall result in an increase in engine power above that demanded by the position of the driver’s accelerator.

21.2.4. The $V_{adj}$ value shall be permanently indicated to the driver by a visual display. This does not preclude temporary interruption of the display for safety reasons.

21.2.5. The ASLD must respect the following requirements:

21.2.5.1. The adjustable speed limitation device shall not actuate the vehicle’s braking system except for vehicles of categories M1 and N1, where the vehicle’s service braking system may be actuated.

21.2.5.2. The method used to limit speed when reaching $V_{adj}$ must be possible whichever transmission type (automatic or manual) of the vehicle.

21.2.5.3. The vehicle speed shall be limited to $V_{adj}$.

21.2.5.4. It shall still be possible to exceed speed $V_{adj}$.

21.2.5.4.1. To exceed $V_{adj}$ a positive action will be required (*).

21.2.5.4.2. Whenever the vehicle speed exceeds $V_{adj}$ the driver must be informed by means of a suitable or warning signal other than the speedometer.

21.2.5.5. The speed limitation function shall permit a normal use of the accelerator control for gear selection.

21.2.6. Setting of $V_{adj}$:

21.2.6.1. It shall be possible to set $V_{adj}$ value by steps no greater than 10 km/h (5 mph) between 30 km/h (20 mph) and the maximum design max speed of the vehicle.

21.2.6.2. In the case of vehicles manufactured for sale in any country where imperial units are used, it shall be possible to set $V_{adj}$ value by steps not greater than 5 mph between 20 mph and the maximum design speed of the vehicle.

(*) e.g. kickdown.
21.2.6.3. This shall be achieved by a control device operated by the driver.

21.2.7. Activation/de-activation

21.2.7.1. When $V_{\text{adj}}$ is set by the driver it shall not capable of being modified by any means other than the designated control device.

21.2.7.2. The ASLD must be capable to be activated/de-activated at any time.

21.2.7.3. The ASLD must be de-activated at each engine stop and the key removed.

21.3. Tests

21.3.1. The speed limitation tests to which the SLD presented for approval is submitted as well as the performances required are described in Annex 5 to this Regulation.

21.3.2. The adjustable speed limitation tests to which the ASLD presented for approval are submitted are described in Annex 6 of this Regulation.

21.3.2.1. Three different speeds will be chosen for the tests at the discretion of the technical service.

22. Modification of the SLD type and extension of approval

22.1. Every modification of the SLD type shall be notified to the administrative department which approved this type of SLD. The department may then either:

22.1.1. Consider that the modifications made are unlikely to have an appreciable adverse effect and that in any case the SLD still complies with the requirements, or

22.1.2. Require a further test report for some or all the tests described in Annex 5 to this Regulation from the technical service responsible for conducting the tests.

22.2. Confirmation or refusal of approval, specifying the alteration, shall be communicated by the procedure specified in paragraph 20.3 above to the Parties to the 1958 Agreement which apply this Regulation.

22.3. The competent authority issuing the extension of approval shall assign a series number to each communication form drawn up for such an extension and inform thereof the other Parties to the 1958 Agreement applying this Regulation by means of a communication form conforming to the model in Annex 3 to this Regulation.

23. Conformity of production

23.1. Every SLD approved under this Regulation shall be so manufactured as to conform to the type approved by meeting the requirements set out in paragraph 21.

23.2. In order to verify that the requirements of paragraph 23.1 are met, suitable checks of the production shall be carried out.

23.3. The holder of the approval shall, in particular:

23.3.1. Ensure existence of procedures for effective quality control of the SLD;
23.3.2. Have access to the testing equipment necessary for checking conformity of each approved type;

23.3.3. Ensure that test result data are recorded and that the annexed documents remain available for a period to be determined in agreement with the administrative service;

23.3.4. Analyse the results of each type of test, in order to verify and ensure the consistency of the SLD characteristics, making allowance for permissible variations in industrial production;

23.3.5. Ensure that for each type of SLD at least the constituent materials and the method of assembly correspond to the SLD approved. If necessary the tests prescribed in paragraph 1 of Annex 5 to this Regulation shall be carried out;

23.3.6. Ensure that any set of samples or test components giving evidence of non-conformity in the type of test in question shall give rise to a further sampling and test. All necessary steps shall be taken to restore conformity of the corresponding production.

23.4. The competent authority which has granted type approval may at any time verify the conformity control methods applied in each production unit.

23.4.1. At every inspection, the test records and production records shall be presented to the visiting inspector.

23.4.2. The inspector may select samples at random to be tested in the manufacturer’s laboratory. The minimum number of samples may be determined according to the results of the manufacturer’s own checks.

23.4.3. Where the quality level appears unsatisfactory or it seems necessary to verify the validity of the tests carried out in application of paragraph 23.4.2 the inspector shall select samples to be sent to the technical service which conducted the type-approval tests.

23.4.4. The competent authority may carry out any test prescribed in this Regulation. The normal frequency of inspections authorised by the competent authority shall be one every two years. In cases where unsatisfactory results are found during one of these inspections, the competent authority shall ensure that all necessary steps are taken to restore conformity of production as rapidly as possible.

24. PENALTIES FOR NON-CONFORMITY OF PRODUCTION

24.1. The approval granted in respect of a type of SLD pursuant to this Regulation may be withdrawn if the requirements laid down in paragraph 21 above are not complied with.

24.2. If a Contracting Party to the 1958 Agreement applying this Regulation withdraws an approval it has previously granted, it shall forthwith so notify the other Contracting Parties applying this Regulation, by means of a communication form conforming to the model in Annex 3 to this Regulation.

25. PRODUCTION DEFINITELY DISCONTINUED

25.1. If the holder of the approval completely ceases to manufacture a type of SLD approved in accordance with this Regulation, he shall so inform the authority which granted the approval. Upon receiving the relevant communication, that authority shall inform thereof the other Parties to the 1958 Agreement applying this Regulation by means of a communication form conforming to the model in Annex 3 to this Regulation.
26. NAMES AND ADDRESSSES OF TECHNICAL SERVICES RESPONSIBLE FOR CONDUCTING APPROVAL TESTS AND OF ADMINISTRATIVE DEPARTMENTS

26.1. The Contracting Parties to the 1958 Agreement applying this Regulation shall communicate to the United Nations secretariat the names and addresses of the technical services responsible for conducting approval tests and of the administrative departments which grant approval and to which forms certifying approval or extension or refusal or withdrawal of approval or production definitely discontinued issued in other countries, are to be sent.

ANNEX 4

EXAMPLES OF ARRANGEMENTS OF APPROVAL MARKS

MODEL A

The above approval mark affixed to an SLD/ASLD shows that the SLD/ASLD has been approved in the Netherlands (E4), pursuant to Regulation No 89 under approval number 002439. The first two digits of the approval number indicate that the approval was granted in accordance with the requirements of Regulation No 89 in its original form.

MODEL B

The above approval mark affixed to a vehicle shows that the vehicle has been approved in the Netherlands (E4), pursuant to Regulation No 89 under approval number 002439. The first two digits of the approval number indicate that the approval was granted in accordance with the requirements of Regulation No 89 in its original form. The figure and range of figures, expressed in km/h, surrounded by a rectangle, show the set speed to which the vehicle is limited (1), and the range of set speeds within which the vehicle may be limited.

(1) This figure may be inserted after application of the rest of the mark, when it is known where the individual vehicle will be registered. Variations of this part of the mark shall not be considered as changes in the vehicle type.
The above approval mark affixed to a vehicle shows that the vehicle has been approved in the Netherlands (E4), pursuant to Regulations Nos 89 and 31 (1). The first two digits of the approval number indicate that, at the dates when the respective approvals were given. Regulation No 31 already included the 01 series of amendments, and Regulation No 89 was in its original form. The figure and range of figures, expressed in km/h, surrounded by a rectangle, show the set speed to which the vehicle is limited and the range of set speeds within which the vehicle may be limited.

(1) The latter number is given as an example only.
ANNEX 5

TESTS AND PERFORMANCE REQUIREMENTS

1. TESTS OF SPEED LIMITATION

At the request of the applicant for approval, tests shall be made in accordance with either paragraphs 1.1, 1.2 or 1.3 below.

1.1. MEASUREMENT ON TEST TRACK

1.1.1. Preparation of the vehicle

1.1.1.1. A vehicle representative of the vehicle type to be approved or an SLD/ASLD representative of the type of SLD/ASLD, as appropriate, shall be submitted to the technical service;

1.1.1.2. The settings of the engine of the test vehicle, particularly the fuel feed (carburetor or injection system), shall conform to the specifications of the vehicle manufacturer;

1.1.1.3. The tyres shall be bedded and the pressure shall be as specified by the manufacturer for the vehicle;

1.1.1.4. The vehicle mass shall be the unladen mass as declared by the manufacturer.

1.1.2. Characteristics of the test track

1.1.2.1. The test surface shall be suitable to enable stabilised speed to be maintained and shall be free from uneven patches. Gradients shall not exceed 2 % and shall not vary by more than 1 % excluding camber effects.

1.1.2.2. The test surface shall be free from standing water, snow or ice.

1.1.3. Ambient weather conditions

1.1.3.1. The mean wind speed measured at a height at least 1m above the ground shall be less than 6 m/s with gusts not exceeding 10 m/s.

1.1.4. Acceleration test method: (see the figure below)

1.1.4.1. The vehicle running at a speed which is 10 km/h below the set speed shall be accelerated as much as possible using a fully positive action on the accelerator control. This action shall be maintained at least 30 seconds after the vehicle speed has been stabilised. The instantaneous vehicle speed shall be recorded during the test in order to establish the curve of the speed versus the time and during the operation of the speed limiting function/adjustable speed limitation function or of the SLD/ASLD as appropriate. The accuracy of the speed measurement shall be ± 1 %. The accuracy of the time measurement shall be less than 0.1 s.

1.1.4.2. The test shall be considered satisfactory if the following conditions are met:

1.1.4.2.1. The stabilised speed reached by the vehicle shall not exceed the set speed \( V_{\text{stab}} \leq V_{\text{set}} \). However, a tolerance of 5 % of the \( V_{\text{set}} \) value, or 5 km/h, whichever is the greater, is acceptable;
1.1.4.2.2. After the stabilised speed is reached for the first time:

1.1.4.2.2.1. $V_{\text{max}}$ shall not exceed $V_{\text{stab}}$ by more than 5%;

1.1.4.2.2.2. the rate of change of speed shall not exceed 0.5 m/s² when measured on a period greater than 0.1 s;

1.1.4.2.2.3. the stabilised speed conditions specified in 1.1.4.2.3 shall be attained within 10 s of first reaching $V_{\text{stab}}$;

1.1.4.2.3. When stable speed control has been achieved:

1.1.4.2.3.1. speed shall not vary by more than 4% of $V_{\text{stab}}$ or 2 km/h whichever is greater;

1.1.4.2.3.2. the rate of change of speed shall not exceed 0.2 m/s² when measured on a period greater than 0.1 s;

1.1.4.2.3.3. $V_{\text{stab}}$ is the average speed calculated for a minimum time interval of 20 seconds beginning 10 seconds after first reaching $V_{\text{stab}}$;

1.1.4.2.4. Tests in acceleration shall be carried out and the acceptance criteria verified for each gear ratio allowing in theory the set speed to be exceeded.

$V_{\text{max}}$ is the maximum speed reached by the vehicle in the first half period of the response curve.

1.1.5. Test method at steady speed

1.1.5.1. The vehicle shall be driven at full acceleration up to the steady speed, then shall be maintained at this speed without any modification on the test basis of at least 400 metres. The vehicle’s average speed shall be measured on this test basis. The average speed measurement shall then be repeated on the same test basis, but run in the opposite direction, and under the same procedures. The stabilisation speed for the whole test previously considered is the mean of the two average speeds measured for both test runs. The whole test including the calculation of the stabilisation speed shall be carried out five times. The speed measurements shall be carried out with an accuracy of ± 1%, the time measurements with an accuracy of 0.1 s.
1.1.5.2. The tests shall be considered satisfactory if the following conditions are met:

1.1.5.2.1. On each test run \( V_{\text{stab}} \) shall not exceed \( V_{\text{set}} \). However, a tolerance of 5 % of the \( V_{\text{set}} \) value, or 5 km/h, whichever is the greater, is acceptable.

1.1.5.2.2. The difference between the stabilisation speeds obtained during each test run shall be equal to or less than 3 km/h.

1.1.5.2.3. Tests in steady speed shall be carried out and the acceptance criteria verified for each gear ratio allowing in theory the set speed to be exceeded.

1.2. TESTS ON CHASSIS DYNAMOMETER

1.2.1. Characteristics of the chassis dynamometer

The equivalent inertia of the vehicle mass shall be reproduced on the chassis dynamometer with an accuracy of ± 10 %. The speed of the vehicle shall be measured with an accuracy of ± 1 %. The time shall be measured with an accuracy of 0,1 s.

1.2.2. Acceleration test method

1.2.2.1. The power absorbed by the brake during the test shall be set to correspond with the vehicle's resistance to progress at the tested speed(s). This power may be established by calculation and shall be set to an accuracy of ± 10 %. At the request of the applicant, and with the agreement of the competent authority, the power absorbed may alternatively be set at 0,4 \( P_{\text{max}} \) (\( P_{\text{max}} \) is the maximum power of the engine). The vehicle running at a speed which is 10 km/h below the set speed \( V_{\text{set}} \) shall be accelerated at the maximum possibilities of the engine by using a fully positive action on the acceleration control. This action shall be maintained at least 20 seconds after the vehicle speed has been stabilised. The instantaneous vehicle speed shall be recorded during the test in order to draw the curve of the speed versus time during the operation of the speed limiting function/adjustable speed limitation function or of the SLD/ASLD as appropriate.

1.2.2.2. The test shall be considered satisfactory if the provisions of the preceding paragraph 1.1.4.2 and its subparagraphs are satisfied.

1.2.3. Test method for steady speed test

1.2.3.1. The vehicle shall be installed on the chassis dynamometer. The following acceptance criteria should be met for power absorbed by the chassis dynamometer varying progressively from the maximum power \( P_{\text{max}} \) to a value equal to 0.2 \( P_{\text{max}} \). The speed of the vehicle shall be recorded in the full range of power defined above. The maximum speed of the vehicle shall be determined on this range. Test and record defined above should be made five times.

1.2.3.2. The tests shall be considered satisfactory if the provisions of the preceding paragraph 1.1.5.2 and its subparagraphs are satisfied.

1.3. TEST ON ENGINE TEST BENCH

This test procedure can be used only when the applicant can demonstrate to the satisfaction of the technical services that this method is equivalent to the measurement on a test track.

2. TEST OF ENDURANCE

The speed limiting function/adjustable speed limitation function or the SLD/ASLD, as appropriate, shall be submitted to the durability test prescribed below. However, this may be omitted if the applicant demonstrates resistance to those effects.

2.1. The device is cycled on a bench simulating the attitude and the movement which the SLD/ASLD would experience on the vehicle.
2.2. A functioning cycle is maintained by means of a control system supplied by the manufacturer. The diagram of the cycle is given below:

\[
\begin{align*}
& t_0 - t_1, t_2 - t_3, t_4 - t_5, t_6 - t_7: \text{ the time taken to do this operation} \\
& t_1 - t_2 = 2 \text{ seconds} \\
& t_3 - t_4 = 1 \text{ second} \\
& t_5 - t_6 = 2 \text{ seconds} \\
& t_7 - t_8 = 1 \text{ second}
\end{align*}
\]

Five conditionings are defined hereafter. The SLD/ASLD samples of the type presented for approval shall be submitted to the conditionings according to the table below:

<table>
<thead>
<tr>
<th>Conditioning</th>

2.2.1. Conditioning 1: tests at ambient temperature (20 °C ± 2 °C)
Number of cycles: 50 000

2.2.2. Conditioning 2: tests at high temperatures

2.2.2.1. Electronic components
The components shall be cycled in a climatic chamber. A temperature of 65 °C ± 5 °C is maintained during the whole functioning.
Number of cycles: 12 500.

2.2.2.2. Mechanical components
The components shall be cycled in a climatic chamber. A temperature of 100 °C ± 5 °C is maintained during the whole functioning.
Number of cycles: 12 500.

2.2.3. Conditioning 3: tests at low temperatures
In the climatic chamber used for conditioning 2, a temperature of –20 °C ± 5 °C is maintained during the whole functioning.
Number of cycles: 12 500.

2.2.4. Conditioning 4: tests in a salted atmosphere. (Only for components exposed to the ambient road environment.)
The device shall be cycled in a salted atmosphere chamber. The concentration of sodium chloride is of 5 % and internal temperature of the climatic chamber is of 35 °C ± 2 °C.
Number of cycles: 12 500.
2.2.5. Conditioning 5: vibration test

2.2.5.1. The SLD/ASLD is mounted in a similar way to its mounting on the vehicle.

2.2.5.2. Sinusoidal vibrations shall be applied in all three planes. Logarithmic sweep shall be 1 octave per minute;

2.2.5.2.1. First test: frequency range 10–24 Hz, amplitude ± 2 mm;

2.2.5.2.2. Second test: frequency range 24–1,000 Hz for chassis and cab-mounted components, input 2.5 g. For engine-mounted components, input 5 g.

2.3. ACCEPTANCE CRITERIA OF THE ENDURANCE TESTS

2.3.1. At the end of the endurance tests, no modification of the device's performances shall be observed regarding the set speed;

2.3.2. However, if any breaking down of the device occurs during one of the endurance tests, a second device can be submitted to the considered endurance tests at the manufacturer's request.
ANNEX 6

TESTS AND PERFORMANCE REQUIREMENTS FOR ASLD

1. TESTS OF ADJUSTABLE SPEED LIMITATION SYSTEM

1.1. Preparation of the vehicle

1.1.1. A vehicle representative of the vehicle type to be approved or an ASLD representative of the type of ASLD, as appropriate, shall be submitted to the technical service.

1.1.1.1. Where an ASLD is to be approved it shall be fitted by the manufacturer to a vehicle which is representative of the type for which the device is intended.

1.1.2. The settings of the engine of the test vehicle, particularly the fuel feed (carburettor or injection system), shall conform to the specifications of the vehicle manufacturer.

1.1.3. The tyres shall be bedded and the pressure shall be as specified by the manufacturer for the vehicle.

1.1.4. The vehicle mass shall be the minimum kerb weight declared by the manufacturer.

1.2. Characteristics of the test track

1.2.1. The test surface shall be suitable for enabling stabilised speed to be maintained and shall be free from uneven patches. Gradients shall not exceed 2%.

1.2.2. The test surface shall be free from standing water, snow or ice.

1.3. Ambient weather conditions

1.3.1. The mean wind speed measured at a height of at least 1 m above the ground shall be less than 6 m/s with gusts not exceeding 10 m/s.

1.4. Test for the driver being informed that $V_{adj}$ is being exceeded

1.4.1. The positive action (as referred to in paragraphs 5.2.5.4.1 and 21.2.5.4.1) required to enable $V_{adj}$ to be exceeded shall be applied when the vehicle is running at a speed 10 km/h below $V_{adj}$.

1.4.2. The vehicle shall be accelerated up to a speed at least 10 km/h greater than $V_{adj}$.

1.4.3. This speed shall be maintained for at least 30 seconds.

1.4.4. Instantaneous vehicle speed shall be recorded during the test and measured with an accuracy of $\pm 1\%$.

1.4.5. The test shall be considered satisfactory if the following conditions are met:

1.4.5.1. The driver is informed by a warning signal when the actual speed of the vehicle is exceeding $V_{adj}$ by more than 3 km/h.

1.4.5.2. The driver continues to be informed for the duration of the time that $V_{adj}$ is exceeded by more than 3 km/h.
1.5. Test of the adjustable speed limitation function/device.

1.5.1. With the ASLF/D deactivated, for each gear ratio selected for the chosen test speed $V_{adj}$, the technical service shall measure the forces required on the accelerator control to maintain $V_{adj}$ and a speed ($V_{adj^*}$), which is 20 per cent or 20 km/h (whichever is the greater) faster than $V_{adj}$.

1.5.2. With the ASLF/D activated and set at $V_{adj}$, the vehicle shall be run at a speed of 10 km/h below $V_{adj}$. The vehicle shall then be accelerated by increasing the force on the accelerator control over a period of 1 s ± 0.2 s to that required to attain $V_{adj^*}$. This force shall then be maintained for a period of at least 30 seconds, after the vehicle speed has stabilised.

1.5.3. The instantaneous vehicle speed shall be recorded during the test in order to establish the curve of the speed versus the time and during the operation of the ASLF/D as appropriate. The accuracy of the speed measurement shall be ± 1 %. The accuracy of the time measurement shall be less than 0.1 s.

1.5.4. The test shall be considered satisfactory if the following conditions are met:

1.5.4.1. The stabilised speed ($V_{stabil}$) reached by the vehicle shall not exceed $V_{adj}$ by more than 3 km/h

1.5.4.1.1. After $V_{stabil}$ is reached for the first time:

1.5.4.1.1.1. $V_{max}$ shall not exceed $V_{stabil}$ by more than 5 %;

1.5.4.1.1.2. the rate of change of speed shall not exceed 0.5 m/s² when measured over a period greater than 0.1 s;

1.5.4.1.1.3. the stabilised speed conditions specified in 1.5.4.1.1 shall be attained within 10 s of first reaching $V_{stabil}$;

1.5.4.1.2. When stable speed control has been achieved:

1.5.4.1.2.1. speed shall not vary by more than 3 km/h of $V_{adj}$;

1.5.4.1.2.2. the rate of change of speed shall not exceed 0.2 m/s² when measured over a period greater than 0.1 s;

1.5.4.1.2.3. $V_{stabil}$ is the average speed calculated for a minimum time interval of 20 seconds beginning 10 seconds after first reaching $V_{stabil}$;

1.5.4.1.3. Tests in acceleration shall be carried out and the acceptance criteria verified for each gear ratio allowing in theory $V_{adj^*}$ to be achieved.
