

C/2024/6284

17.10.2024

**Publication of a communication of approval of a standard amendment to the product specification
for a name in the wine sector as referred to in Article 17(2) and (3) of Commission Delegated
Regulation (EU) 2019/33**

(C/2024/6284)

This communication is published in accordance with Article 17(5) of Commission Delegated Regulation (EU) 2019/33 ⁽¹⁾.

COMMUNICATING THE APPROVAL OF A STANDARD AMENDMENT

‘Zuid-Holland’

PGI-NL-A0965-AM07

Date of communication: 19.7.2024

DESCRIPTION OF AND REASONS FOR THE APPROVED AMENDMENT

Description of and reasons for the standard amendment

This amendment changes the grape varieties authorised for PGI Zuid-Holland as included in the product specification and the single document, and is an update as a result of practice.

Description

Twelve varieties have been added to the list of varieties authorised for this PGI, namely:

Amigne B

Donauriesling B

Grüner Veltliner B

Merlot Kanthus N

Merlot Khorus N

Pineau d’Aunis N

Pinot Kors N

Riesel B

Sauvignon Nepsis B

Savagnin Blanc B (Traminer)

Trousseau Gris G

Voltis B

Reasons: New varieties of grape are being developed and added to the OIV’s variety catalogue when they are authorised, after a long development period and extensive authorisation procedures. If these varieties are included in the OIV variety catalogue, they may also be eligible to be added to the list of authorised varieties for this PGI.

This amendment is a standard amendment because it does not concern the name of the PGI, the product category, the link or the marketing restrictions.

⁽¹⁾ OJ L 9, 11.1.2019, p. 2.

SINGLE DOCUMENT

1. **Name(s)**

Zuid-Holland

2. **Geographical indication type**

PGI – protected geographical indication

3. **Categories of grapevine product**

1. Wine
4. Sparkling wine
5. Quality sparkling wine
8. Semi-sparkling wine
9. Aerated semi-sparkling wine

3.1. *Combined Nomenclature code*

— 22 – BEVERAGES, SPIRITS AND VINEGAR

2204 – Wine of fresh grapes, including fortified wines; grape must other than that of heading 2009

4. **Description of the wine(s)**

1. Wine category 1: wine

BRIEF WRITTEN DESCRIPTION

Organoleptic characteristics

The white wines have a fresh acidity, are very fruity and have green aromas.

The red wines are characterised by red fruit and are very fruity.

Analytical characteristics

The definitions set out in the EU Regulations / Dutch ministerial orders apply with regard to the following characteristics:

- Maximum total alcoholic strength
- Maximum volatile acidity
- Maximum total sulphur dioxide
- Maximum enrichment, deacidification and acidification following approval

General analytical characteristics

- Maximum total alcoholic strength (in % volume): —
- Minimum actual alcoholic strength (in % volume): 6,5
- Minimum total acidity: 59,85 milliequivalents per litre
- Maximum volatile acidity (in milliequivalents per litre): —
- Maximum total sulphur dioxide (in milligrams per litre): —

2. Wine category 4: sparkling wine

BRIEF WRITTEN DESCRIPTION

Organoleptic characteristics

The white wines have a fresh acidity, are very fruity and have green aromas.

The red wines are characterised by red fruit and are very fruity.

Analytical characteristics

The definitions set out in the EU Regulations / Dutch ministerial orders apply with regard to the following characteristics:

- Maximum total alcoholic strength
- Maximum volatile acidity
- Maximum total sulphur dioxide
- Maximum enrichment, deacidification and acidification following approval

General analytical characteristics

- Maximum total alcoholic strength (in % volume): —
- Minimum actual alcoholic strength (in % volume): 6,5
- Minimum total acidity: 59,85 milliequivalents per litre
- Maximum volatile acidity (in milliequivalents per litre): —
- Maximum total sulphur dioxide (in milligrams per litre): —

3. Wine category 5: quality sparkling wine

BRIEF WRITTEN DESCRIPTION

Organoleptic characteristics

The white wines have a fresh acidity, are very fruity and have green aromas.

The red wines are characterised by red fruit and are very fruity.

Analytical characteristics

The definitions set out in the EU Regulations / Dutch ministerial orders apply with regard to the following characteristics:

- Maximum total alcoholic strength
- Maximum volatile acidity
- Maximum total sulphur dioxide
- Maximum enrichment, deacidification and acidification following approval

General analytical characteristics

- Maximum total alcoholic strength (in % volume): —
- Minimum actual alcoholic strength (in % volume): 6,5
- Minimum total acidity: 59,85 milliequivalents per litre
- Maximum volatile acidity (in milliequivalents per litre): —
- Maximum total sulphur dioxide (in milligrams per litre): —

4. Wine category 8: semi-sparkling wine

BRIEF WRITTEN DESCRIPTION

Organoleptic characteristics

The white wines have a fresh acidity, are very fruity and have green aromas.

The red wines are characterised by red fruit and are very fruity.

Analytical characteristics

The definitions set out in the EU Regulations / Dutch ministerial orders apply with regard to the following characteristics:

- Maximum total alcoholic strength
- Maximum volatile acidity
- Maximum total sulphur dioxide
- Maximum enrichment, deacidification and acidification following approval

General analytical characteristics

- Maximum total alcoholic strength (in % volume): —
- Minimum actual alcoholic strength (in % volume): 6,5
- Minimum total acidity: 59,85 milliequivalents per litre
- Maximum volatile acidity (in milliequivalents per litre): —
- Maximum total sulphur dioxide (in milligrams per litre): —

5. Wine category 9: aerated semi-sparkling wine

BRIEF WRITTEN DESCRIPTION

Organoleptic characteristics

The white wines have a fresh acidity, are very fruity and have green aromas.

The red wines are characterised by red fruit and are very fruity.

Analytical characteristics

The definitions set out in the EU Regulations / Dutch ministerial orders apply with regard to the following characteristics:

- Maximum total alcoholic strength
- Maximum volatile acidity

5. **Winemaking practices**

5.1. *Specific oenological practices*

Specific oenological practice

WHITE — harvesting, sorting, pressing, pre-fining, fermentation, fining/ageing, bottling

RED — harvesting, sorting, crushing/destemming, primary fermentation, pressing, malolactic fermentation, fining/ageing, bottling

5.2. *Maximum yields*

1. White grapes

95 hectolitres per hectare

2. Red grapes

80 hectolitres per hectare

6. **Demarcated geographical area**

Province of South Holland, delimited by the provincial borders laid down in accordance with the Constitution.

7. **Wine grape variety(ies)**

8. Description of the link(s)

8.1. Geographical area: description and climate

In the south-west there are Holocene marine clay and sand deposits, often on a peat subsoil. Along the River Lek and old catchment areas of the Rhine (including the Old Rhine), the soil consists of fluvial clay and sand, sometimes mixed with peat.

Spread across the centre, there is Holocene peat on marine clay deposits and marine clay and sand with peat inclusions.

Along the coastal dunes (sand), there are deposits that often contain a band of marine sand mixed with clay or peat ('geest soils').

The climate is characterised by:

- an average rainfall of 879 mm/year
- 1 675 hours of sunshine per year (average for Rotterdam/Valkenburg)
- an average temperature of 10,3 °C over the year as a whole and 16,9 °C over the summer
- a difference between the daytime and night-time temperatures in September of 7,9 °C

8.2. Causal link

The climate makes it possible to achieve the stated yield and ripeness. The ripeness expresses itself in a fresh, very fruity wine with green notes and a red wine characterised by red fruit.

9. Essential further conditions (packaging, labelling, other requirements)

Legal framework:

EU rules

Type of further condition:

Derogation concerning production in the defined geographical area

Description of the condition:

Area in immediate proximity for production of the wine

As regards the production area for winemaking (vinification), all Dutch provinces are defined as being in immediate proximity.

Part or all of a base wine made in the area covered by the PGI or an area in immediate proximity may be bottled by a contractor as semi-sparkling or sparkling wine.

This may take place outside the PGI area or area in immediate proximity while retaining the PGI name. In that case, the bottler is also to be indicated on the label, possibly using a code number (bottled by..... for.....).
