COMMISSION IMPLEMENTING REGULATION (EU) 2017/930

of 31 May 2017

concerning the authorisation of a preparation of a microorganism strain DSM 11798 of the Coriobacteriaceae family as a feed additive for all avian species and amending Implementing Regulation (EU) No 1016/2013

(Text with EEA relevance)

THE EUROPEAN COMMISSION,

Having regard to the Treaty on the Functioning of the European Union,

Having regard to Regulation (EC) No 1831/2003 of the European Parliament and of the Council of 22 September 2003 on additives for use in animal nutrition (1), and in particular Article 9(2) and Article 13(2) thereof,

Whereas:

(1) Regulation (EC) No 1831/2003 provides for the authorisation of additives for use in animal nutrition and for the grounds and procedures for granting such authorisation.

(2) In accordance with Article 7 of Regulation (EC) No 1831/2003, an application was submitted for a new use of a preparation of a microorganism strain DSM 11798 of the Coriobacteriaceae family and for an amendment of the terms of the current authorisation for pigs granted by Commission Implementing Regulation (EU) No 1016/2013 (2). That application was accompanied by the particulars and documents required under Article 7(3) of Regulation (EC) No 1831/2003, and by the relevant data to support the amendment request.

(3) The application concerns the authorisation of a new use of the preparation of a microorganism strain DSM 11798 of the Coriobacteriaceae family as a feed additive for all avian species, to be classified in the additive category 'technological additives' and the modification of the terms of the current authorisation for pigs to extend the use to all trichothenecene mycotoxins.

(4) The European Food Safety Authority ('the Authority') concluded in its opinion of 7 December 2016 (3) that, under the proposed conditions of use, the preparation of a microorganism strain DSM 11798 of the Coriobacteriaceae family does not have an adverse effect on animal health, human health or the environment. The Authority recognised that the preparation of a microorganism strain DSM 11798 of the Coriobacteriaceae family has the capacity to reduce deoxynivalenol (DON) from contaminated feed. It concluded that the preparation has the capacity to reduce the 12,13-epoxide group in a number of representative trichothenes and in other mycotoxins of the same structural type regardless of the animal species or category receiving contaminated feed. The Authority does not consider that there is a need for specific requirements of post-market monitoring. It also verified the report on the method of analysis of the feed additive in feed submitted by the Reference Laboratory set up by Regulation (EC) No 1831/2003.

(5) In order to allow for the use of the additive with other trichothenes, it is appropriate to amend Implementing Regulation (EU) No 1016/2013.

(6) The assessment of the preparation of a microorganism strain DSM 11798 of the Coriobacteriaceae family shows that the conditions for authorisation, as provided for in Article 5 of Regulation (EC) No 1831/2003, are satisfied. Accordingly, the use of that preparation should be authorised as specified in the Annex to this Regulation.

(7) The measures provided for in this Regulation are in accordance with the opinion of the Standing Committee on Plants, Animals, Food and Feed,

HAS ADOPTED THIS REGULATION:

Article 1

Authorisation

The preparation specified in Annex I, belonging to the additive category ‘technological additives’ and to the functional group ‘substances for the reduction of the contamination of feed by mycotoxins’, is authorised as an additive in animal nutrition subject to the conditions laid down in that Annex.

Article 2

Amendments to Implementing Regulation (EU) No 1016/2013

The Annex to Implementing Regulation (EU) No 1016/2013 is replaced by Annex II to this Regulation.

Article 3

Entry into force

This Regulation shall enter into force on the twentieth day following that of its publication in the Official Journal of the European Union.

This Regulation shall be binding in its entirety and directly applicable in all Member States.

For the Commission

The President

Jean-Claude JUNCKER
### Category of technological additives. Functional group: substances for the reduction of the contamination of feed by mycotoxins: trichothecenes
