(Non-legislative acts)

REGULATIONS

COMMISSION IMPLEMENTING REGULATION (EU) 2019/1839

of 31 October 2019

amending Implementing Regulation (EU) 2017/1152 as regard the determination and reporting of WLTP CO₂ values for certain categories of new light commercial vehicles and adjusting the input data for the correlation tool

(Text with EEA relevance)

THE EUROPEAN COMMISSION,

Having regard to the Treaty on the Functioning of the European Union,

Having regard to Regulation (EU) No 510/2011 of the European Parliament and of the Council of 11 May 2011 setting emission performance standards for new light commercial vehicles as part of the Union's integrated approach to reduce CO₂ emissions from light-duty vehicles (¹), and in particular the first subparagraph of Article 8(9) and the third subparagraph of Article 13(6) thereof,

Whereas:

(1) Light commercial vehicles for which type-approvals have been granted pursuant to Regulation (EC) No 595/2009 of the European Parliament and of the Council (²) and extended pursuant to the fourth paragraph of Article 2 of that Regulation may be placed on the market in 2020, and as end-of-series vehicles until June 2022, with CO₂ emission values determined in accordance with the New European Drive Cycle (NEDC).

(2) Those vehicles should, however, be adequately accounted for in the calculation of the specific CO₂ emission targets applicable to manufacturers from 2021 to 2024, and for verifying compliance with those targets in the years 2021 and 2022 in accordance with points 1 to 5 of Part B of Annex I to Regulation (EU) 2019/631 of the European Parliament and of the Council (³).

(3) Commission Implementing Regulation (EU) 2017/1152 (⁴) provides a methodology for the correlation of NEDC CO₂ emission values and those determined in accordance with the Worldwide Harmonised Light Vehicle Test Procedure (WLTP) as set out in Commission Regulation (EU) 2017/1151 (⁵). It is therefore appropriate to clarify in Regulation (EU) 2017/1152 which WLTP CO₂ emission values should be attributed to this specific group of light commercial vehicles, with a view to ensuring that those values take into account the CO₂ emission values that are to be determined for this group of vehicles from 1 January 2021 in accordance with Annex VIII to Commission Regulation (EU) No 582/2011 (⁶).

Regulation (EU) 2019/631 provides that the EU fleet-wide CO\textsubscript{2} emission targets for new light commercial vehicles for 2025 and 2030 are to be calculated on the basis of the CO\textsubscript{2} emissions measured in accordance with Regulation (EU) 2017/1151 for new light commercial vehicles registered in 2020 (hereinafter ‘measured CO\textsubscript{2} emission values’).

Implementing Regulation (EU) 2017/1152 sets out rules about the calculation and reporting by manufacturers of those measured CO\textsubscript{2} emission values. It is, however, necessary to further specify how those values are to be determined, in particular, as regards Not-Off-Vehicle Charging Hybrid Electric Vehicles (NOVC-HEV) and Off-Vehicle Charging Hybrid Electric Vehicles (OVC-HEV).

It should also be clarified how the measured CO\textsubscript{2} emission values are to be determined where several CO\textsubscript{2} emissions tests are performed for the purpose of type-approval.

The correlation of the CO\textsubscript{2} emissions of NOVC-HEVs and OVC-HEVs should be performed on the basis of physical vehicle tests and not on the basis of simulations performed by the correlation tool, due to the complexity of adapting the correlation tool to take into account such vehicle technologies. In order to ensure effective verification of the correlation results, technical test data relating to those vehicles should be provided to the Commission in the same way as for conventional vehicles.

Implementing Regulation (EU) 2017/1152 should therefore be amended accordingly.

The measures provided for in this Regulation are in accordance with the opinion of the Climate Change Committee,

HAS ADOPTED THIS REGULATION:

Article I

Implementing Regulation (EU) 2017/1152 is amended as follows:

(1) in Article 3(1), point (d) is replaced by the following:

‘(d) with regard to end-of-series vehicles referred to in Article 27 of Directive 2007/46/EC, and to N1 vehicles with a reference mass between 2 380 kg and 2 610 kg for which the type-approvals granted pursuant to Regulation (EC) No 595/2009, in respect of their engines, have been extended in accordance with the fourth paragraph of Article 2 of that Regulation (HDV-derived N1 vehicles'), the measured NEDC CO\textsubscript{2} values, and, where available, NEDC CO\textsubscript{2} values.';

(2) Article 4 is amended as follows:

(a) the following paragraph 1a is added:

‘1a. With regard to HDV-derived N1 vehicles registered in 2020 for which CO\textsubscript{2} emission values have been determined in accordance with UNECE Regulation No 101 as referred to in Annex VIII to Regulation (EU) No 582/2011 in its version of 31 January 2014, the following shall apply:

(a) Where an extension of the type approval pursuant to Regulation (EC) No 595/2009 has been granted by 31 December 2020 and a WLTP CO\textsubscript{2} value has been determined in accordance with Regulation (EU) 2017/1151 in conjunction with Annex VIII to Regulation (EU) No 582/2011, that WLTP CO\textsubscript{2} value shall be attributed to the HDV-derived N1 vehicle registered in 2020, if the type, variant and version code of that vehicle is the same as that recorded in the type approval certificate of the type approval extension in question.

The manufacturer shall by 28 February 2021 submit the following information to the Commission with regard to each vehicle covered by this point:

(i) Vehicle identification number;
(ii) Type, variant and version code;
(iii) Type approval number, including the extension number;
(iv) A copy of the type approval certificate.'
(b) Where the type approval pursuant to Regulation (EC) No 595/2009 is not extended by 31 December 2020, the following WLTP CO$_2$ value shall be attributed to each HDV-derived N1 vehicle concerned:

$$\text{WLTP}\text{CO}_2 = \text{NEDC}_{\text{ind}} \times \left(\frac{\text{WLTP}_{\text{2020}}}{\text{NEDC}_{\text{2020}}}\right)$$

Where,

- $\text{NEDC}_{\text{ind}}$ is the measured NEDC CO$_2$ value in 2020 of the individual vehicle;
- $\text{NEDC}_{\text{2020}}$ is the average specific emissions of CO$_2$ in 2020 of the manufacturer determined in accordance with this Regulation, calculated in accordance with the second indent of Article 4(3) of Regulation (EU) 2019/631, and without including CO$_2$ savings resulting from the application of Article 11 of that Regulation;
- $\text{WLTP}_{\text{2020}}$ is the average specific emissions of CO$_2$ in 2020 of the manufacturer determined in accordance with Regulation (EU) 2017/1151 or in accordance with point (a) of this paragraph, calculated in accordance with the second indent of Article 4(3) of Regulation (EU) 2019/631, and without including CO$_2$ savings resulting from the application of Article 11 of that Regulation.

$\text{NEDC}_{\text{2020}}$ and $\text{WLTP}_{\text{2020}}$ shall only include those vehicles with a WLTP CO$_2$ value determined in accordance with Regulation (EU) 2017/1151 or with point (a) of this paragraph.

The manufacturer shall by 28 February 2021 submit to the Commission a copy of the certificate of conformity of each vehicle covered by this point.

Where the manufacturer does not provide the information and documents referred to in points (a) and (b), the WLTP CO$_2$ value of the vehicles concerned shall be attributed as set out in paragraph 2(a) of this Article.'

(b) Paragraph 2 is amended as follows:

(i) the introductory subparagraph is replaced by the following:

‘With regard to end-of-series vehicles that have not been type approved in accordance with Commission Regulation (EU) 2017/1151 but are registered in 2020, the following WLTP CO$_2$ values shall be attributed to each registered vehicle:’

(ii) the following subparagraph is added:

‘With regard to end-of-series vehicles registered in 2021 and 2022, the WLTP CO$_2$ values to be attributed to each of those vehicles shall be those determined in accordance with paragraph 1a(b) of this Article.’

(3) Article 6a is amended as follows:

(a) the first subparagraph of paragraph 1 is replaced by the following:

‘Manufacturers shall calculate the combined, or where applicable weighted combined CO$_2$ emissions, determined as $M_{\text{CO}_2, \text{measured}}$, for each light commercial vehicle registered in 2020 in accordance with the following:

(a) For pure internal combustion engine vehicles:

the equation for calculating $M_{\text{CO}_2, \text{ind}}$ set out in the second subparagraph of paragraph 3.2.3.2.4. of Sub-Annex 7 to Annex XXI to Regulation (EU) 2017/1151, where the terms $M_{\text{CO}_2,H}$ and $M_{\text{CO}_2,L}$ shall, for the interpolation family concerned, be replaced by the values $M_{\text{CO}_2,C,5, (combined)}$, taken from the entries 2.5.1.1.3. (vehicle H) and 2.5.1.2.3. (vehicle L) of the EC type-approval certificate, as indicated in the model set out in Appendix 4 to Annex I to Regulation (EU) 2017/1151;

(b) For Not-Off-Vehicle Charging Hybrid Electric Vehicles (NOVC-HEV):

the equation: $M_{\text{CO}_2, \text{measured}} = M_{\text{CO}_2,L,C,5} + K_{\text{ind}} \times (M_{\text{CO}_2,H,C,5} - M_{\text{CO}_2,L,C,5})$

Where,

- $M_{\text{CO}_2,L,C,5}$ is the value $M_{\text{CO}_2,C,5, (combined)}$ for the interpolation family concerned, taken from entry 2.5.1.2.3. of the EC type-approval certificate, as indicated in the model set out in Appendix 4 to Annex I to Regulation (EU) 2017/1151;
- $K_{\text{ind}}$ is the interpolation coefficient for the considered individual vehicle for the applicable WLTP test cycle as specified in paragraph 4.5.3 of Sub-Annex 8 to Annex XXI to Regulation (EU) 2017/1151;
For Off-Vehicle Charging Hybrid Electric Vehicles (OV-C-HEV):

the equation: $M_{CO2,measured} = M_{CO2,L,C,5} + K_{ind} \times (M_{CO2,H,C,5} - M_{CO2,L,C,5})$

Where,

$M_{CO2,L,C,5}, M_{CO2,H,C,5}$ are, for the interpolation family concerned, determined in accordance with the formula set out in paragraph 4.1.3.1 of Sub-Annex 8 to Annex XXI to Regulation (EU) 2017/1151, where the term $M_{i,CD}$ shall be replaced by the value $M_{CO2,CD}$ (combined) taken from the entry 2.5.3.2 for vehicle H and L, as applicable, of the EC type-approval certificate, and the term $M_{i,CS}$ shall be replaced by the value $M_{CO2,C,5}$ (combined) taken from entry 2.5.3.1 of the EC type-approval certificate for vehicle H, L, or M, as applicable;

$K_{ind}$ is the interpolation coefficient for the considered individual vehicle for the applicable WLTP test cycle as defined in paragraph 4.5.3 of Sub-Annex 8 to Annex XXI to Regulation (EU) 2017/1151.

(b) the following paragraph 1a is inserted:

‘1a. Where more than one measurement is recorded in entries 2.5.1.1.3., 2.5.1.2.3., 2.5.3.1., or 2.5.3.2. of an EC type-approval certificate, the $M_{CO2,C,5}$ or $M_{CO2,CD}$ values referred to in paragraph 1 shall for the purpose of this provision be determined as follows:

(a) in the case of one measurement: the combined value recorded for Test 1;

(b) in the case of two measurements: the average of the two combined values recorded for Tests 1 and 2;

(c) in the case of three measurements: the average of the three combined values recorded for Tests 1, 2 and 3;’

(4) Annex I is amended as follows:

(a) in point 2.1, the last sentence of the second paragraph is replaced by the following:

‘With regard to Not-Off-Vehicle Charging Hybrid Electric Vehicles (NOV-C-HEV) and Off-Vehicle Charging Hybrid Electric Vehicles (OV-C-HEV), the NEDC $CO_2$ values to be used as a reference for the purpose of this Section 3 shall be determined by way of physical vehicle tests instead of correlation tool simulations. The physical measurements shall be performed in accordance with the relevant provisions referring to physical vehicle tests set out in this Annex. The input data for the physical vehicle tests shall be determined and submitted to the type-approval authority or, where applicable, technical service, in accordance with point 2.4.;’

(b) in point 2.2a, point (a) is replaced by the following:

‘(a) The correction of the WLTP test results for $CO_2$ mass emissions in accordance with Appendix 2 to Sub-Annex 6 and Appendix 2 to Sub-Annex 8 to Annex XXI to Regulation (EU) 2017/1151 shall apply to all such test results, notwithstanding the provisions in paragraph 3.4.4(a) of Appendix 2 to Sub-Annex 6 and paragraph 1.1.4(a) of Appendix 2 to Sub-Annex 8 to Annex XXI to that Regulation;’

(c) in point 2.4, table 1 is amended as follows:

(i) in entry 24, the text in the second column under ‘Input parameters for the correlation tool’ is replaced by the words ‘Service battery capacity’;

(ii) entries 38 to 41 are replaced by the following:

<table>
<thead>
<tr>
<th></th>
<th>WLTP CO$_2$ value phase 1</th>
<th>gCO$_2$/km</th>
<th>Entry 2.1.1.2.1. of Appendix 8a to Annex I of (EU) 2017/1151</th>
<th>Uncorrected measured value $M_{CO2,p,1}$ of phase Low</th>
</tr>
</thead>
<tbody>
<tr>
<td>38</td>
<td>(Charge-Sustaining value in case of NOVC and OVC-HEVs)</td>
<td>gCO$_2$/km</td>
<td>Idem</td>
<td>Uncorrected measured value $M_{CO2,p,1}$ of phase Medium</td>
</tr>
</tbody>
</table>
| 40 | WLTP CO₂ value phase 3  
(Charge-Sustaining value in case of NOVC and OVC-HEVs) | gCO₂/km | Idem | Uncorrected measured value 
\( M_{CO2,p,1} \) of phase High |
| 41 | WLTP CO₂ value phase 4  
(Charge-Sustaining value in case of NOVC and OVC-HEVs) | gCO₂/km | Idem | Uncorrected measured value 
\( M_{CO2,p,1} \) of phase Extra-High* |

(iii) in entry 60, the text in the second column under 'Input parameters for the correlation tool' is replaced by the words 'WLTP Alternator (DC/DC converter — low voltage side — in case of NOVC and OVC-HEVs) Current';

(iv) in entry 61, the text in the second column under 'Input parameters for the correlation tool' is replaced by the words 'Service battery current';

(v) entry 75 is deleted;

(vi) entry 77 is replaced by the following:

| 77 | WLTP CO₂ measured corrected (Charge-Sustaining value in case of NOVC and OVC-HEVs) for vehicle H and/or L | g/km | Entry 2.1.1.2.1 of Appendix 8a to Annex I of (EU) 2017/1151 | Combined measured CO₂ emissions for vehicle H and L after all applicable corrections, \( M_{CO2,CO} \). In case of 2 and 3 WLTP tests all measured results shall be provided (except for NOVC and OVC-HEVs where only final type-approval value shall be provided). |

(vii) the following entries 79 to 101 are added:

<p>| 79 | WLTP Charge-depleting CO₂ results (combined) | gCO₂/km | 2.5.3.2 of Appendix 4 to Annex I to Regulation (EU) 2017/1151 | Combined charge depleting CO₂ mass emissions ( M_{CO2,CD} ) (average values in case of 2 and 3 tests) for the Type I test as calculated according to paragraph 4.1.2 of Sub-Annex 8 to Annex XXI to Regulation (EU) 2017/1151 (OVC-HEV only) |
| 80 | WLTP utility factor-weighted combined CO₂ emission (measured) | gCO₂/km | Calculated according to paragraph 4.1.3.1 of Sub-Annex 8 to Annex XXI to Regulation (EU) 2017/1151 | Calculated weighted combined results (measured) as described in Article 7a(1)(c) of this Regulation (OVC-HEV only) |
| 81 | WLTP utility factor-weighted combined CO₂ emission (declared) | gCO₂/km | Entry 2.5.3.3 of the EC type-approval certificate | Calculated weighted combined results (declared) taken from entry 2.5.3.3 of the EC type-approval certificate (OVC-HEV only) |
| 82 | WLTP Equivalent all electric range (EAER) combined | km | Entry 2.5.3.7.2 (EAER) of the EC type-approval certificate | Combined Equivalent all Electric Range (EAER) (OVC-HEV only) |
| 83 | Index number of the transition cycle | — | Entry 2.1.1.4.1.4 of Appendix 8a to Annex I to Regulation (EU) 2017/1151 | For OVC-HEV indicate the index number of the transition cycle |</p>

</table>

(*) P0: the electric machine is connected to the engine transmission belt therefore has the engine speed as reference speed; P1: the electric machine is connected to the engine crankshaft therefore has the engine speed as reference speed; P2: the electric machine is mounted right upstream the transmission (gearbox or continuously variable transmission), therefore has the transmission input speed as reference speed; P2 planetary: the electric machine is connected to the gear of a planetary gearset that is not connected to the internal combustion engine or the final drive sides, here referred to as the planetary side. In this case the speed ratio to be specified is the ratio between the electric machine and planetary side rotational speed (reference speed) reflecting the speed multiplication/reduction effect of a reduction gear; P3: the electric machine is right upstream the final drive of a driven axle therefore has the final drive input rotational speed as reference speed (this includes electric machines mounted on the gear of a planetary gearset on the final drive side). A vehicle can have up to two P3 machines (one for the front (P3a) and one for the rear (P3b) axle); P4: the electric machine is downstream the final drive, therefore has the wheel speed as reference speed. A vehicle can have up to four P4 motors (one for each wheel, where P4a indicates front wheels and P4b rear wheels). Further specifications of these inputs are to be provided in the input template for the correlation tool.

(d) in the second paragraph of point 4.2.1.4.2, the following sentence is added:

‘In the case of point (d), where the road load coefficients for the road load matrix family have been determined in accordance with point 2.3.8.2.1(a), the road load coefficients for the individual vehicle may be determined in accordance with the formulae set out in the second paragraph of point 4.2.1.5.’

**Article 2**

This Regulation shall enter into force on the twentieth day following that of its publication in the *Official Journal of the European Union*.

Point (4)(c) of Article 1 shall apply from 1 January 2020.
This Regulation shall be binding in its entirety and directly applicable in all Member States.

Done at Brussels, 31 October 2019.
